Lab - How do Fossils Show Change?

Most organisms live, die, and decompose. They leave no traces of having lived. Under certain conditions, an organism's remains or tracks may be preserved as a fossil. Fossils give clues about how an organism looked and where it lived. They are often used by scientists as evidence of change.

A fossil is any remains of a once-living thing. Fossils may be only the outline of some plant, animal, or other organism that is preserved in rock. Sometimes, entire skeletons of animals that lived millions of years ago are found.

Research Questions:

- How are ancient horses and present day horses similar?
- How have horses changed over time to become adapted to their environment?

Prediction: Make a prediction about what changes have occurred to adapt horses to their current environment.

- I predict that over time horses have changed to become better adapted to this environment:
