ChargeOut! Edward M. Bilek, 2009 ChargeOut a discounted cash flow methodology in spreadsheet format for analyzing machine costs is compared with traditional machine rate methodologies Four machine rate models are compared and a common data set representative of logging skidders costs is used to illustrate the differences between ChargeOut and the machine rate methods The study found that the machine rate methodologies were not standardized and the methodologies had differences in accounting for ownership other fixed costs and variable operating costs The result was that two of the machine rate models calculated hourly rates that were higher than needed to provide the specified return on capital and two of the machine rate models calculated hourly rates that were insufficient to provide the specified return In contrast ChargeOut's break even rate returned exactly the specified return Differences between the results calculated by the machine rate methods occur because of different implicit assumptions used within the models formulas largely because the machine rate models are unable to properly incorporate the time value of money Whereas ChargeOut can be sufficiently constrained to approximately replicate a machine rate calculation doing so sacrifices much of ChargeOut's power and flexibility Machine

rate models cannot be configured to replicate ChargeOut's calculations Machine rate models cannot be configured to calculate cash flows allow for uneven costs or machine hours incorporate loans that have a different life than the expected machine life or perform an after tax analysis ChargeOut can do all of these [Federal Register](#) ,2013-09 **Military Construction Appropriations** United States.
