Get familiar with the basic knots utilized in rigging

SQUARE KNOT

The square knot is often used to join two pieces of rope of the same size. The square knot is not dependable when joining ropes of different sizes together.

CLOVE HITCH

A clove hitch is a quick way to attach a rope to a pipe or round shaft.

DOUBLE HALF HITCH

This is a sliding and choking hitch, which can secure a rope to almost any square or round connection point on a load. This hitch is easy to tie, though sometimes difficult to untie due to friction and coddling between the rope sections.

INSIDE BOWLINE w/EYEBOLT

A bowline is a secure way to tie a loop in a rope and easy to undo when not under load. It is intended to be a free-standing open loop that is securely attached to a connection point on the load.

SHEET BEND

The sheet bend is a quick way of joining two ropes of the same or different sizes together, which is easy to untie, when necessary.
