Dominguez, Alba M. Ramos, 2008-01-01 Infective endocarditis IE is a microbial infection of the endocardium In subacute IE the previously damaged surface of cardiac valve becomes the starting point for the deposition of platelets and the formation of a platelet fibrin clot IE develops after bacteria enters the bloodstream and colonize the clot Platelets and

fibrin mount up over the bacteria increasing the size of the vegetation As additional layers of fibrin are added leukocytes are incapable to break through the vegetation Treatment with antibiotics can also be problematic because the bacteria within the vegetation often become less metabolically active and many antibiotics require active bacterial growth to be effective The overall incidence of infective endocarditis is 1.7 to 4.0 per 100 000 population and in adults older than 50 years it exceeds 15 per 100 000 population Almost 50-60% of cases of acute IE do not necessitate an underlying heart condition to be present The microorganisms most accountable for the development of acute IE e.g. *S. aureus* are exceedingly virulent and able to colonize normal heart valves The incidence of acute IE has been progressively rising and now surpasses the number of subacute IE cases Presenting symptoms and clinical signs include fever malaise weight loss splenomegaly cardiac murmur petechiae Roth's spots Janeway lesions and Osler nodes This book provides leading edge research on this field from around the world *Subacute Bacterial Endocarditis* Emanuel Libman, Charles Kaye Friedberg, 1948 **Infective Endocarditis**

and Other Intravascular Infections Lawrence R. Freedman, 2012-12-06 The most important example of intravascular infection is infective endocarditis IE a common and serious disorder in man In the past these infections were uniformly fatal but since the development of potent antimicrobial agents bacteriological cure has become practical and predictable So for a while it seemed that intravascular infection would diminish in importance and be relegated to the stockpile of illnesses which physicians one or two generations earlier used to see frequently In recent years however spectacular technological advances cardiac surgery intravascular devices hemodialysis accompanied by profound social deterioration intravenous drug usage have provided new breeding grounds for the development of these infections So it is that a large percentage of intravascular infections may be looked upon today as one of the diseases of medical progress and social evolution This progress however has not only contributed to the encouragement of the disease there is another side to the coin the same technological advances that have served to increase the frequency of infection e.g. intravascular plastic catheters have also led to the first simple easily reproducible laboratory animal model for the study of the disease thus advancing our understanding of the prophylaxis treatment and general biology of these infections Figures 1 and 2 Similarly whereas the insertion of prosthetic heart valves has created a new group of patients with endocarditis these same surgical techniques are lifesaving to patients with endocarditis whose aortic valves have perforated **Color Atlas of Infective Endocarditis** David R.

Recent Advances in Infective Endocarditis Steve W. Kerrigan,2013-06-27 Endocarditis is an inflammation of the lining of the heart and valves It can be due to a non infectious cause but when the inflammation is associated with an infection usually bacterial it is known as infective endocarditis It is typically characterized by the development of a large septic thrombus on one of the cardiac valves As this thrombus grows it can lead to valve failure or may fragment forming a septic embolus that is associated with high mortality if the target of the embolus is the brain heart or lung This book reviews multi organ complications associated with Infective endocarditis including significant recent advances in molecular mechanisms underlying thrombus formation on the cardiac valve anti microbial treatment and surgery **Treatment of Infective Endocarditis** Alan L.
