Deformation and Fracture Behaviour of Polymers Wolfgang Grellmann, Sabine Seidler, 2013-03-09 The application of fracture mechanics to polymers and composites allows the quantitative description of the toughness behaviour by means of fracture mechanics parameters and enables preventive failure analysis In recent years this young scientific discipline has developed rapidly and now the experimental results are looking for more applications in industrial practice However the practical applications of fracture mechanics parameters to structural integrity assessment are severely restricted owing to their limited transferability from specimens to components Indeed geometry independent fracture mechanics parameters are very important for the reliable functioning of polymers and components in nearly all industrial application fields These application fields include the polymer development quality control construction and polymer specific design of reliable components in the motor industry the electrical industry and the manufacture of household appliances as well as applications in information technology and medical applications The present status report on the deformation and fracture behaviour of polymer materials was composed on the basis of revised lectures presented at the Merseburg discussion conference entitled Deformation and Fracture Behaviour of Polymers and additional single contributions The editors and authors have tried hard to present information about the applied fracture mechanics of polymers and composites in the light of their current research work

Life Cycle Networks Frank-Louthar Krause, G. Seliger, 2012-12-06 The globalisation of markets and the expansion of product responsibility into the entire product life cycle lead to an increasing competitive situation for nationally and internationally operating companies Therefore to win this competition the use of the most effective and efficient resources regarding the whole product life cycle is necessary Since these resources are globally distributed the different tasks both within a phase of product life cycle and those spread over different phases are distributed as well The global interference of these tasks requires a close multilateral co operation

of the companies concerned Current information and communication technologies and modern management concepts offer high potentials to meet these requirements The international seminar of CIRP on Life Cycle Engineering titled Life Cycle Networks was a forum for the presentation and discussion of current research work and recent advancements on these strategic issues for current and future engineering Complex requirements and innovative solutions to support and realise Life Cycle Networks has been revealed and summarised The employment of information technology to support both specific phases of product life cycle and holistic approaches will be the main focus This volume contains the papers presented at the seminar which provide opportunities to identify the state of the art and address future needs The parts in this volume correspond to the sessions of the seminar and are presented under the following headings Life Cycle Management Life Cycle Design Design for Environment Design for Recycling Life Cycle Assessment Disassembly IT Networks The Handbook of Highway Engineering T.F. Rate-Quality Optimized Video Coding Yoo-Sok Saw, 2012-12-06 Rate Quality Optimized Video Coding discusses the matter of optimizing or negotiating the data rate of compressed digital video and its quality which has been a relatively neglected topic in either side of image video coding and tele traffic management Video rate management becomes a technically challenging task since it is required to maintain a certain video quality regardless of the availability of transmission or storage media This is caused by the broadband nature of digital video and inherent algorithmic features of mainstream video compression schemes e g H 261 H 263 and MPEG series In order to maximize the media utilization and to enhance video quality the data rate of compressed video should be regulated within a budget of available media resources while maintaining the video quality as high as possible In Part I Chapters 1 to 4 the non stationarity of digital video is discussed Since the non stationary nature is also inherited from

algorithmic properties of international video coding standards which are a combination of statistical coding techniques the video rate management techniques of these standards are explored Although there is a series of known video rate control techniques such as picture rate variation frame dropping etc these techniques do not view the matter as an optimization between rate and quality From the view of rate quality optimization the quantizer is the sole means of controlling rate and quality Thus quantizers and quantizer control techniques are analyzed based on the relationship of rate and quality In Part II Chapters 5 and 6 as a coherent approach to non stationary video established but still thriving nonlinear techniques are applied to video rate quality optimization such as artificial neural networks including radical basis function networks and fuzzy logic based schemes Conventional linear techniques are also described before the nonlinear techniques are explored By using these nonlinear techniques it is shown how they influence and tackle the rate quality optimization problem Finally in Chapter 7 rate quality optimization issues are reviewed in emerging video communication applications such as video transcoding and mobile video This chapter discusses some new issues and prospects of rate and quality control in those technology areas Rate Quality Optimized Video Coding is an excellent reference and can be used for advanced courses on the topic

Environmental Planning and Management Christian N. Madu, 2007 This book focuses on environmental planning and management Environmental problems are not purely scientific some of the major problems deal with poor management and

the inability to involve people in environmental decision making process The approach taken in this book is to review environmental problems as they are affected by poor planning and management Understanding of management issues involved will help to get top management to buy into environmental management The tendency is for top management to view environmental management efforts as expensive and wasteful to an organization However when top management is exposed to the high cost of doing nothing and the lack of competitiveness as a result of poor environmental quality it is more likely to buy into the idea of environmental quality and work towards achieving sustainable goals *Machinery* European Commission.
