The Art and Science of Making the New Man in Early 20th-Century Russia Yvonne Howell, Nikolai Kremmentsov, 2021-12-02 The idea that morally mentally and physically superior new men might replace the currently existing mankind has periodically seized the imagination of intellectuals leaders and reformers throughout history This volume offers a multidisciplinary investigation into how the new man was made in Russia and the early Soviet Union in the first third of the 20th century The traditional narrative of the Soviet new man as a creature forged by propaganda is challenged by the strikingly new and varied case studies presented here The book

focuses on the interplay between the rapidly developing experimental life sciences such as biology medicine and psychology and countless cultural products ranging from film and fiction dolls and museum exhibits to pedagogical projects sculptures and exemplary agricultural fairs With contributions from scholars based in the United States Canada the UK Germany and Russia the picture that emerges is emphatically more complex contradictory and suggestive of strong parallels with other new man visions in Europe and elsewhere In contrast to previous interpretations that focused largely on the apparent disconnect between utopian new man rhetoric and the harsh realities of everyday life in the Soviet Union this volume brings to light the surprising historical trajectories of new man visions their often obscure origins acclaimed and forgotten champions unexpected and complicated results and mutual interrelations In short the volume is a timely examination of a recurring theme in modern history when dramatic advancements in science and technology conjoin with anxieties about the future to fuel dreams of a new and improved mankind

Black Coal Miners in America Ronald L. Lewis, 2014-07-11 From the early day of mining in colonial Virginia and Maryland up to the time of World War II blacks were an important part of the labor force in the coal industry Yet in this as in other enterprises their role has heretofore been largely ignored Now Roland L. Lewis redresses the balance in this comprehensive history of black coal miners in America The experience of blacks in the industry has varied widely over time and by region and the approach of this study is therefore more comparative than chronological Its aim is to define the patterns of race relations that prevailed among the miners Using this approach Lewis finds five distractive systems of race relations There was in the South before and after the Civil War a system of slavery and convict labor an enforced servitude without legal compensation This was succeeded by an exploitative system whereby the southern coal operators using race as an excuse paid lower wages to blacks and thus succeeded in depressing the entire wage scale By contrast in northern and midwestern mines the pattern was to exclude blacks from the industry so that whites could control their jobs and their communities In the central Appalachians although blacks enjoyed greater social equality the mine operators manipulated racial tensions to keep the work force divided and therefore weak Finally with the advent of mechanization black laborers were displaced from the mines to such an extent that their presence in the coal fields is now nearly a thing of the past By analyzing the ways race class and community shaped social relations in the coal fields **Black Coal Miners in America** makes a major contribution to the understanding of regional labor social and African American history
