Educational Paths to Mathematics Uwe Gellert, Joaquim Giménez Rodríguez, Corinne Hahn, Sonia Kafoussi, 2015-05-18 This book offers fresh insight and understanding of the many ways in which children youth and adults may find their paths to mathematics. The chapters of the volume offer and analyse promising new ways into mathematics. The focus is on spaces and modalities of learning dialogue and inquiry embodiment and aesthetic experience information and communication technology and on the use of mathematics in public communication. The chapters present new mathematical activities and conceptions enriching the repertoire of mathematics education practices Critical commentaries discuss the innovative potential of the new approaches to the teaching and learning of mathematics As a consequence the commentaries point to requirements and open issues in the field of research in mathematics education The volume is remarkably international Teachers and researchers from 14 countries authored 21 chapters and 7 commentaries The reader is invited to reflect on the particular effect of presenting avenues to mathematics contrived in diverse national settings in which the praxis of mathematics education might look different compared to what happens in the reader's place. The book starts a series of sourcebooks edited by CIEAEM the Commission Internationale pour l Etude et l Am lioration de l Enseignement des Math matiques International Commission for the Study and Improvement of Mathematics Education **Two-Dimensional Geometries: A Problem-Solving Approach** C. Herbert Clemens, 2019-03-20 This book on two dimensional geometry uses a problem solving approach to actively engage students in the learning process The aim is to guide readers through the story of the subject while giving them room to discover and partially construct the story themselves The book bridges the study of plane geometry and the study of curves and surfaces of non constant curvature in three dimensional Euclidean space One useful feature is that the book can be adapted to suit different audiences. The first half of the text covers plane geometry without and with Euclid's Fifth Postulate followed by a brief synthetic treatment of spherical geometry through the excess angle formula This part only requires a background in high school geometry and basic trigonometry and is suitable for a quarter course for future high school geometry teachers A brief foray into the second half could complete a semester course The second half of the text gives a uniform treatment of all the complete simply connected two dimensional geometries of constant curvature one geometry for each real number its curvature including their groups of isometries geodesics measures of lengths and areas as well as formulas for areas of regions bounded by polygons in terms of the curvature of the geometry and the sum of the interior angles of the polygon A basic knowledge of real linear algebra and calculus of several real variables is useful background for this portion of the text Journey into Geometries Marta Sved, 2020-07-31
