 Dudeney, 1995      Proof Technology in Mathematics Research and Teaching Gila Hanna, David A. Reid, Michael de  
 Villiers, 2019-10-02 This book presents chapters exploring the most recent developments in the role of technology in proving  
 The full range of topics related to this theme are explored including computer proving digital collaboration among  
 mathematicians mathematics teaching in schools and universities and the use of the internet as a site of proof learning  
 Proving is sometimes thought to be the aspect of mathematical activity most resistant to the influence of technological  
 change While computational methods are well known to have a huge importance in applied mathematics there is a  
 perception that mathematicians seeking to derive new mathematical results are unaffected by the digital era The reality is  
 quite different Digital technologies have transformed how mathematicians work together how proof is taught in schools and  
 universities and even the nature of proof itself Checking billions of cases in extremely large but finite sets impossible a few  
 decades ago has now become a standard method of proof Distributed proving by teams of mathematicians working

independently on sections of a problem has become very much easier as digital communication facilitates the sharing and comparison of results Proof assistants and dynamic proof environments have influenced the verification or refutation of conjectures and ultimately how and why proof is taught in schools And techniques from computer science for checking the validity of programs are being used to verify mathematical proofs Chapters in this book include not only research reports and case studies but also theoretical essays reviews of the state of the art in selected areas and historical studies The authors are experts in the field
