

9.3 ADDITIONAL OPTIONS

9.3.1 AIRLINE DESCRIPTION, LIMITATIONS & OPERATION

NOTE: Airline options are available on all models of the Viking SCBA.

- 9.3.1.1 The Airline Attachment is located on the left waistbelt strap. It is approved with Hansen HK. Hansen HK couplings include locking devices.

IMPORTANT

Only Hansen HK airline fittings are offered on CBRN certified units.

The use of airline attachments on CBRN approved units are not NIOSH CBRN approved for use in confirmed or potential CBRN environments.

- 9.3.1.2 When using supplied air, the user must ensure that the cylinder valve is closed. Failure to do so may result in reduced cylinder duration.
- 9.3.1.3 Airline respirators can be used only when the respirators are supplied with respirable air meeting the requirements of CGA G-7.1 Grade D or higher quality.
- 9.3.1.4 When used as a combination apparatus, only 20% of the service pressure may be used on entry.
- 9.3.1.5 This approval applies only when the device is supplied with respirable breathing air through 6 to 300 feet of hose at air pressures between 80 to 120 pounds per square inch gauge or from self contained air supply.
- 9.3.1.6 Follow Donning Procedures located in Section 3.0 and Safety Checks in Section 3.2.
- 9.3.1.7 Plug airline hose from Viking into supplied airline hose. Supplied air pressure shall be between 80 to 120 psi. Close cylinder valve and continue to breathe normally. If supplied air is interrupted, open cylinder valve fully, unplug airline hose and then egress to a safe area.
- 9.3.1.8 Take necessary actions to monitor the supplied air source pressure while operating with supplied air.
- 9.3.1.9 To transfer from supplied air to cylinder air, open cylinder valve first. Disconnect supplied air hose by retracting coupling sleeve.
- 9.3.2 **ESCAPES AIR SYSTEM (EAS) DESCRIPTION,**

LIMITATIONS & OPERATION

NOTE: The EAS option is available on all models of the Viking SCBA.

- 9.3.2.1 The EAS tether is designed so you do not have to unplug the regulator hose from the facemask in an IDLH atmosphere. The EAS tether includes two feet of retractable hose stored within the backframe. The end of the hose includes two couplings, one male and one female, and a combination handle/dust cap. When stored, the EAS handle is located on the lower right side of the backframe (from the user's perspective). In an emergency, the EAS tether is pulled out of the backframe and connected to another EAS tether forming a four foot long combined tether hose.
- 9.3.2.2 If the EAS is used, egress immediately to a safe, respirable atmosphere. The rescuer must monitor their cylinder air closely due to increased air consumption.
- 9.3.2.3 Although the EAS is a NIOSH accepted SCBA accessory, NIOSH does not approve the use of EAS devices. Use of the EAS voids NIOSH approvals while in use.

- 9.3.2.4 **REMOVE THE EAS TETHER:** Using your right hand, reach back above the cylinder valve knob and locate the buddy breather handle. Pull down on the handle and completely pull out the hose. The tether is approximately two feet long.
- 9.3.2.5 **CONNECT TO ANOTHER EAS TETHER:** Each EAS tether includes both male and female quick connect couplings. Connect one coupling, either male or female, to the opposite coupling on the other EAS
