new science and how it changed the course of 20th century astronomy With a Foreword by Ron Ekers **An Assessment of the Prospects for Inertial Fusion Energy** National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Board on Physics and Astronomy, Committee on the Prospects for Inertial Confinement Fusion Energy Systems, 2013-07-05 The potential for using fusion energy to produce commercial electric power was first explored in the 1950s Harnessing fusion energy offers the prospect of a nearly carbon free energy source with a virtually unlimited supply of fuel Unlike nuclear fission plants appropriately designed fusion power plants would not produce the large amounts of high level nuclear waste that requires long term disposal Due to these prospects many nations have initiated research and development R compares the various technical approaches to IFE and identifies the scientific and engineering challenges associated with developing inertial confinement fusion ICF in particular as an energy source It also provides guidance on an R D roadmap at the conceptual level for a national program focusing on the design and construction of an inertial fusion energy demonstration plant **Commerce, Justice, Science, and Related Agencies Appropriations for 2016** United States. Congress. House. Committee on Appropriations. Subcommittee on Commerce, Justice, Science, and Related Agencies, 2015 **Disorder and the Disinformation Society** Jonathan Paul Marshall, James Goodman, Didar Zowghi, Francesca da Rimini, 2015-04-17 This book is the first general social analysis that seriously considers the daily experience of information disruption and software failure within contemporary Western society Through an investigation of informationalism defined as a contemporary form of capitalism it describes the social processes producing informational disorder While most social theory sees disorder as secondary pathological or uninteresting this book takes disordering processes as central to social life The book engages with theories of information society which privilege information order offering a strong counterpoint centred on disinformation Disorder and the Disinformation Society offers a practical agenda arguing that difficulties in producing software are both inherent to the process of developing software and in the social dynamics of informationalism It outlines the dynamics of software failure as they impinge on of information workers and on daily life explores why computerized finance has become inherently self disruptive asks how digital enclosure and intellectual property create conflicts over cultural creativity and disrupt informational accuracy and scholarship and reveals how social media can extend but also distort the development of social movements **Commerce, Justice, Science, and Related Agencies Appropriations for 2017: Justification of the budget estimates** United States. Congress. House. Committee on Appropriations. Subcommittee on Commerce, Justice, Science, and Related Agencies, 2016 **Interdisciplinarity** Andrew Barry, Georgina Born, 2013-06-26 The idea that research should become more interdisciplinary has become commonplace According to influential commentators the unprecedented complexity of problems such as climate change or the social implications of biomedicine demand interdisciplinary efforts integrating both the social and natural sciences In this context the question of whether a given knowledge practice is too disciplinary or interdisciplinary or not disciplinary enough

has become an issue for governments research policy makers and funding agencies Interdisciplinarity in short has emerged as a key political preoccupation yet the term tends to obscure as much as illuminate the diverse practices gathered under its rubric This volume offers a new approach to theorising interdisciplinarity showing how the boundaries between the social and natural sciences are being reconfigured It examines the current preoccupation with interdisciplinarity notably the ascendance of a particular discourse in which it is associated with a transformation in the relations between science technology and society Contributors address attempts to promote collaboration between on the one hand the natural sciences and engineering and on the other the social sciences arts and humanities From ethnography in the IT industry to science and technology studies environmental science to medical humanities cybernetics to art science the collection interrogates how interdisciplinarity has come to be seen as a solution not only to enhancing relations between science and society but the pursuit of accountability and the need to foster innovation Interdisciplinarity is essential reading for scholars students and policy makers across the social sciences arts and humanities including anthropology geography sociology science and technology studies and cultural studies as well as all those engaged in interdisciplinary research It will have particular relevance for those concerned with the knowledge economy science policy environmental politics applied anthropology ELSI research medical humanities and art science

Research Progress on Environmental, Health, and Safety Aspects of Engineered Nanomaterials National Research Council, Division on Engineering and Physical Sciences, Division on Earth and Life Studies, National Materials and Manufacturing Board, Board on Chemical Sciences and Technology, Board on Environmental Studies and Toxicology, Committee to Develop a Research Strategy for Environmental, Health, and Safety Aspects of Engineered Nanomaterials, 2013-12-25 Despite the increase in funding for research and the rising numbers of peer reviewed publications over the past decade that address the environmental health and safety aspects of engineered nanomaterials ENMs uncertainty about the implications of potential exposures of consumers workers and ecosystems to these materials persists Consumers and workers want to know which of these materials they are exposed to and whether the materials can harm them Industry is concerned about being able to predict with sufficient certainty whether products that it makes and markets will pose any environmental health or safety issues and what measures should be taken regarding manufacturing practices and worldwide distribution to minimize any potential risk However there remains a disconnect between the research that is being carried out and its relevance to and use by decision makers and regulators to make informed public health and environmental policy and regulatory decisions Research Progress on Environmental Health and Safety Aspects of Nanomaterials evaluates research progress and updates research priorities and resource estimates on the basis of results of studies and emerging trends in the nanotechnology industry This report follows up the 2012 report A Research Strategy for Environmental Health and Safety Aspects of Engineered Nanomaterials which presented a strategic approach for developing the science and research infrastructure needed to address uncertainties regarding the potential

environmental health and safety risks posed by ENMs This new report looks at the state of nanotechnology research examines market and regulatory conditions and their affect on research priorities and considers the criteria for evaluating research progress on the environmental health and safety aspects of nanotechnology

International Handbook of Research in History,

Philosophy and Science Teaching Michael R. Matthews, 2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical curricular and pedagogical issues in the teaching of science and mathematics. It is contributed to by 130 researchers from 30 countries; it provides a logically structured, fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines as well as by the philosophy of education more generally. The first handbook to cover the field, it lays down a much needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject. The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education, attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects. There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science; this handbook is uniquely positioned as a locus for the discussion. The handbook features sections on pedagogical, theoretical, national and biographical research, setting the literature of each tradition in its historical context. It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching, and that lessons can be learnt from these engagements for the resolution of current theoretical, curricular and pedagogical questions that face teachers and administrators. Science educators will be grateful for this unique encyclopaedic handbook. Gerald Holton, Physics Department, Harvard University. This handbook gathers the fruits of over thirty years' research by a growing international and cosmopolitan community. Fabio Bevilacqua, Physics Department, University of Pavia. **Scientists' Expertise as Performance** Joris Vandendriessche, Evert Peeters, Kaat Wils, 2015-10-06 The essays in this collection explore our reliance on experts within a historical context and across a wide range of fields including agriculture, engineering, health sciences and labour management. Contributors argue that experts were highly aware of their audiences and used performance to gain both scientific and popular support.
