

In attempts to illuminate the paradoxical human growth within the fields of Modern Technology, this study presents some implications of modern development innovations and marvellous technological achievements, which, though built as ideal elements for human progress, still, much misery and suffering is caused by these new development models.

The work stipulates on the countless communication possibilities of the cyberspace that has made it possible for instantaneous interactive connections between persons, ideas and structures where ever and whenever possible. However, it is very shocking that, through these light and speedy no barrier's separating force between the various involved elements, these are, at the same time, acting as a medium wherein very strong expectations and discriminatory tendencies have materialized into wide spread violent animosities and conflicts.

In such, in order to highlight more the problematic surfaces, the document further identifies the basis and concept of the cyberspace and the primary or initiating or building on some social deviance aspects. Some of these aspects have the potency of modifying psychological behavioural patterns of individuals, institutions and roles, and therefore should be considered as, modifying deviating elements from an individual perspective that evolves within an international order.

Notwithstanding the mentioned detrimental effects of the cyberspace on global peace, the document also highlights the probable counter-conflict/peace growth measures necessary for improved human safety.
