Rich Karlgaard Forbes publisher entrepreneur investor and board director takes a surprising turn and argues that there is now a third element that is required for competitive advantage. It fosters innovation, it accelerates strategy and execution, and it cannot be copied or bought. It is found in a perhaps surprising place: your company's values. Karlgaard examined a variety of enduring companies and found that they have one thing in common: all have leveraged their deepest values alongside strategy and execution, allowing them to fuel growth as well as weather hard times. Karlgaard shares these stories and identifies the five key variables that make up every organization's soft edge. Trust: Northwestern Mutual has built a 25 million dollar revenue juggernaut on trust, the foundation of lasting success. Learn how to create an environment that engenders trust and propels high performance. Smarts: In most technical fields, your formal education quickly becomes out of date. How do you keep up? Learn how the Mayo Clinic, Stanford University women's basketball team, and others stay on top by relentlessly pursuing an advantage through smarts. Teamwork: Since collaboration and innovation are a must in the global economy, effective teamwork is vital. Learn how global giant FedEx stays focused and how nimble Nest Labs relies on lean teams with cognitive diversity. Taste: Clever product design and integration are proxies for intelligence because they make customers feel smart. But taste goes further into deep emotional engagement. Specialized Bicycles calls it the elusive spot between data truth and human truth. How can you consistently make products or services that trigger these emotional touch points? Story: Companies that achieve lasting success have an enduring and emotionally appealing story. What's your company's story? How do you tell it your way? Gain the ability to create a powerful narrative in a world where outsiders often exercise the louder voice.

River Flow 2016 George Constantinescu, Marcelo Garcia, Dan Hanes, 2016-06-22 Understanding and being able to predict fluvial processes is one of the biggest challenges for hydraulics and environmental engineers, hydrologists, and other scientists interested in preserving and restoring the diverse functions of rivers. The interactions among flow, turbulence, vegetation, macroinvertebrates, and other organisms, as well as the transport and retention of particulate matter, have important consequences on the ecological health of rivers. Managing rivers in an ecologically friendly way is a major component of sustainable engineering design. Maintenance and restoration of ecological habitats. To address these challenges, a major focus of River Flow 2016 was to highlight the latest advances in experimental, computational, and theoretical approaches that can be used to deepen our understanding and capacity to predict flow and the associated fluid-driven ecological processes, anthropogenic influences, sediment transport, and morphodynamic processes. River Flow 2016 was organized under the auspices of the Committee for Fluvial Hydraulics of the International Association for Hydro-Environment Engineering and Research (IAHR). Since its first edition in 2002, the River Flow conference series has become the main international event focusing on river hydrodynamics, sediment transport, river engineering, and restoration. Some of the

highlights of the 8th International Conference on Fluvial Hydraulics were to focus on inter disciplinary research involving among others ecological and biological aspects relevant to river flows and processes and to emphasize broader themes dealing with river sustainability River Flow 2016 extended abstract book 854 pages full paper CD ROM 2436 pages contains the contributions presented during the regular sessions covering the main conference themes and the special sessions focusing on specific hot topics of river flow research and will be of interest to academics interested in hydraulics hydrology and environmental engineering
