**The Global Technology Revolution, China, In-depth Analyses** Richard S. Silberglitt, Anny Wong, S. R. Bohandy, 2009

In 2007 the Tianjin Binhai New Area TBNA and one of its administrative zones the Tianjin Economic Technological Development Area TEDA in northeast China commissioned the RAND Corporation to perform a technology foresight study to help them develop and implement a strategic vision and plan for economic growth through technological innovation. The principal objectives were to identify the most promising emerging technology applications for TBNA and TEDA to pursue as part of their plan for growth to analyze the drivers and barriers they would face in each case and to recommend action plans for each technology application. TA Seven TAs should form a pivotal part of TBNA's comprehensive strategic plan: cheap solar energy, advanced mobile communications and radio frequency identification, rapid bioassays, membranes, filters and catalysts for water purification, molecular scale drug design, development and delivery, electric and hybrid vehicles and green manufacturing. The specific action plans can be integrated into an overarching strategic plan that rests on three legs: building a state of the art R&D updating and expanding TBNA and TEDA's manufacturing base and positioning TBNA and TEDA for the global marketplace. The plan offers TBNA a wealth of opportunities that will position it for the future development it envisions and each TA emerges from one or more of TEDA's current pillar industries, making for a fluid transition that builds on existing strengths.

Biological Functions for Information and Communication Technologies Hidefumi Sawai, 2011-01-11. By incorporating biologically inspired functions into ICT, various types of new generation information and communication systems can be created. Just some example of areas already benefiting from such design inspiration are network architectures, information processing, molecular communication and complex network modeling for solving real world problems. This book provides the theoretical basis for understanding these developments and explains their practical applications. Highlighted inserts appear throughout to help readers to understand the very latest topics in these emerging research fields. The book ends with a more philosophical discussion on how new ICT solutions can be found by looking at analogous systems in biology. This new way of thinking may help researchers and practitioners to apply innovative ideas in developing next generation technologies.
