Easterday,2019-11-13 The syllable is a natural unit of organization in spoken language whose strongest cross linguistic  
patterns are often explained in terms of a universal preference for the CV structure Syllable patterns involving long  
sequences of consonants are both typologically rare and theoretically marginalized with few approaches treating these as  
natural or unproblematic structures This book is an investigation of the properties of languages with highly complex syllable  
patterns The two aims are i to establish whether these languages share other linguistic features in common such that they  
constitute a distinct linguistic type and ii to identify possible diachronic paths and natural mechanisms by which these  
patterns come about in the history of a language These issues are investigated in a diversified sample of 100 languages 25 of  
which have highly complex syllable patterns Languages with highly complex syllable structure are characterized by a number  
of phonetic phonological and morphological features which serve to set them apart from languages with simpler syllable  
patterns These include specific segmental and suprasegmental properties a higher prevalence of vowel reduction processes  
with extreme outcomes and higher average morpheme word ratios The results suggest that highly complex syllable structure  
is a linguistic type distinct from but sharing some characteristics with other proposed holistic phonological types including  
stress timed and consonantal languages The results point to word stress and specific patterns of gestural organization as  
playing important roles in the diachronic development of these patterns out of simpler syllable structures **The Code of
