The book presents theoretical perspectives for studying, analyzing, and understanding teacher change; descriptions of contextual variables to be considered as one studies and attempts to understand teacher change; and descriptions of professional development programs that resulted in teacher change. One chapter builds a rationale for looking to developmental psychology for guidance in constructing models of reconstructing new forms of mathematical instruction. Another highlights the relevance to mathematics teacher development of research-based knowledge about how children construct mathematical ideas. Other chapters explore the relationships between the various contexts of schooling and instructional change. Included also are chapters that describe and analyze major reform efforts designed to assist teachers in modifying their instructional practices: Cognitively Guided Instruction, Math Cubed, Project Impact, Mathematics in Context, and the Case-Based Project. Finally, the current state of knowledge about encouraging teachers to modify their instruction is discussed; the implications of major research and implementation findings are suggested; and some of the major questions that need to be addressed are identified, such as what we have learned about teacher change.
