Neuropsychology series is designed to highlight cultural and moderator variables involved in the study of brain behavior relationships. Historically the study of psychology and neuropsychology has focused on the male brain being the standard to which all or most variables are considered. The study of sex differences is perhaps the most provoking and far reaching aspect of diversity because frequently women have unique assessment and treatment needs. For example frontal lobe functioning tends to be more contextual for women than for men. These brain functions have behavioral counterparts that directly relate to how interventions may be tailor made to suit the female rather than male patient. The goal in neuropsychology is always to improve diagnosis and treatment outcomes and a cohesive summary of the neuropsychology of the female brain would raise awareness and cultural competency of clinicians in neuropsychology. Authors will focus on sex differences in the neuropsychological cognitive and development literature ethnic and socioeconomic variables affecting diagnosis and treatment of women and social emotional and behavioral manifestations of neuropsychological sex differences.

Voltage-Gated Calcium Channels Gerald Werner Zamponi, 2007-02-26 Voltage gated calcium channels are essential mediators of a range of physiological functions including the communication between nerve cells the regulation of heart beat muscle contraction and secretion of hormones such as insulin. Consequently these channels are critical pharmacological targets in the treatment of a variety of disorders such as epilepsy hypertension and pain. Voltage gated calcium channels have therefore been subject to intense study by numerous investigators over the past few decades and an immense body of work has accumulated. In this book we provide the first comprehensive overview of our current state of knowledge concerning this exciting field of research. Leading off with a general review of calcium signaling and techniques to measure calcium channel activity the book delves into a provocative overview of the history of the calcium channel field contributed by one of the key pioneers in the field Dr Richard Tsien. This is followed by an in depth review of the biochemical and molecular biological characterization of calcium channel genes by Drs Catterall and Snutch whose research has resulted in major advances in the calcium channel field. A number of chapters are dedicated towards various aspects of calcium channel structure and function including channel gating permeation modulation and interactions with members of the exocytic machinery contributed by both established leaders and rising stars in the field.
