Evaluation of Drug Activities D R Laurence, A. L. Bacharach, 2013-10-22 Evaluation of Drug Activities Pharmacometrics Volume 1 provides a review and critical discussion of general and special pharmacological methods used in the search of new drugs This book discusses the fundamental difference between a pharmacological study and a bio assay in the nature of the biological activity Organized into two parts encompassing 19 chapters this book begins with an overview of the pharmacological and toxicological studies on animals This text then discusses the method of producing clinically successful drugs Other chapters consider the objective of toxicity testing in determining the complications arising from the pharmacological action of the drug and also in discovering any unexpected side effects This book discusses as well the pharmacological effects and heredity in laboratory animals The final chapter deals with the various aspects of hypertensive disease and its treatment This book is a valuable resource for scientists biologists physiologists pharmacologists biochemists physicians clinicians and research workers **The neurobiology of emotion-cognition interactions** Hadas Okon-Singer,

Luiz Pessoa, Alexander J. Shackman, 2015-06-12 There is increasing interest in understanding the interplay of emotional and cognitive processes. The objective of the Research Topic was to provide an interdisciplinary survey of cutting edge neuroscientific research on the interaction and integration of emotion and cognition in the brain. The following original empirical reports, commentaries, and theoretical reviews provide a comprehensive survey on recent advances in understanding how emotional and cognitive processes interact, how they are integrated in the brain, and what their implications for understanding the mind and its disorders are. These works encompass a broad spectrum of populations and showcases a wide variety of paradigms, measures, analytic strategies, and conceptual approaches. The aim of the Topic was to begin to address several key questions about the interplay of cognitive and emotional processes in the brain, including: what is the impact of emotional states, anxiety, and stress on various cognitive functions? How are emotion and cognition integrated in the brain? Do individual differences in affective dimensions of temperament and personality alter cognitive performance, and how is this realized in the brain? Are there individual differences that increase vulnerability to the impact of affect on cognition, who is vulnerable and who is resilient? How plastic is the interplay of cognition and emotion? Taken together, these works demonstrate that emotion and cognition are deeply interwoven in the fabric of the brain, suggesting that widely held beliefs about the key constituents of the emotional brain and the cognitive brain are fundamentally flawed. Developing a deeper understanding of the emotional/cognitive brain is important not just for understanding the mind but also for elucidating the root causes of its many debilitating disorders.
