Understanding Mathematics and Science Matters Thomas A. Romberg, Thomas P. Carpenter, Fae Dremock, 2005-03-23 The research reported in this book provides reliable evidence on and knowledge about mathematics and science instruction that emphasizes student understanding instruction consistent with the needs of students who will be citizens in an increasingly demanding technological world The National Center for Improving Student Learning in Mathematics and Science established in 1996 as a research center and funded by the U S Department of Education was instrumental in developing instructional practices supportive of high student achievement in and understanding of mathematics and science concepts NCISLA researchers worked with teachers students and administrators to construct learning environments that exemplify current research and theory about effective learning of mathematics and science The careful programs of research conducted examined how instructional content and design assessment professional development and organizational support can be designed implemented and orchestrated to support the learning of all students This book presents a summary of the concepts findings and conclusions of the Center s research from 1996 2001 In the Introduction the chapters in Understanding Mathematics and Science Matters are situated in terms of the reform movement in school mathematics and school science Three thematically structured sections focus on respectively research directed toward what is involved when students learn mathematics and science with understanding research on the role of teachers and the problems they face when attempting to teach their students mathematics and science with understanding and a collaboration among some of the contributors to this volume to gather information about classroom assessment practices and organizational support for reform The goal of this book is to help educational practitioners policymakers and the general public to see the validity of the reform recommendations understand the recommended guidelines and to use these to transform teaching and learning of mathematics and science in U S classrooms Lessons Learned Tom Loveless, 2008-08-01 Standards for education achievement are under scrutiny throughout the industrial world In this technological age student performance in mathematics is seen as being particularly important For more than four decades international assessments conducted by the International Association for Evaluation of Educational Achievement IEA have measured how well students are learning mathematics in different countries The latest round of mathematics testing of the Trends in Mathematics and Science Study TIMSS takes place in 2007 Beyond the horse race the rankings that compare nations what have we learned from the wealth of data collected in these assessments How do US math curriculums compare to those used overseas Is the effect of technology in the classroom uniform across nations How do popular math reforms fare abroad Those are some of the critical issues tackled in this important book The authors use the database to address several pressing questions about school policy and educational research For example Ina Mullis and Michael Martin review the major lessons learned over the history of TIMSS testing William Schmidt and Richard T Houang examine whether curricular

breadth affects student achievement Jeremy Kilpatrick Vilma Mesa and Finbarr Sloane evaluate American performance in algebra relative to other nations and pinpoint strengths and weaknesses in American students learning of algebra

Teaching and Learning Secondary School Mathematics Ann Kajander, Jennifer Holm, Egan J Chernoff, 2018-10-24
This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators It is both representative of mathematics education generally as well as unique to the particular geography and culture of Canada The chapters address topics of broad applicability such as technology in learning mathematics recent interest in social justice contexts in the learning of mathematics as well as Indigenous education The voices of classroom practitioners the group ultimately responsible for implementing this new vision of mathematics teaching and learning are not forgotten Each section includes a chapter written by a classroom teacher making this volume unique in its approach We have much to learn from one another and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step
Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends **Encyclopedia of**
