A History of International Thought Lucian Ashworth, 2014-01-10 International thought is the product of major political changes over the last few centuries especially the development of the modern state and the industrialisation of the world economy While the question of how to deal with strangers from other communities has been a constant throughout human history it is only in recent centuries that the question of foreign relations and especially imperialism and war have become a matter of urgency for all sectors of society throughout the world This book provides the first comprehensive overview of the evolution of Western international thought and charts how this evolved into the predominantly Anglophone field of International Relations Along the way several myths of the origins of International

Relations are explored and exposed the myth of the peace of Westphalia the myths of Versailles and the nature of the League of Nations the realist idealist Great Debate myth and the myth of appeasement Major approaches to the study of international affairs are discussed within their context and on their own terms rather than being shoe horned into anachronistic paradigms Written in a clear and accessible style Ashworth s analysis reveals how historical myths have been used as gatekeeping devices and how a critical re evaluation of the history of international thought can affect how we see international affairs today

Generalized Descriptive Set Theory and Classification Theory Sy-David Friedman,Tapani Hyttinen, Vadim Kulikov,2014-06-05 Descriptive set theory is mainly concerned with studying subsets of the space of all countable binary sequences In this paper the authors study the generalization where countable is replaced by uncountable They explore properties of generalized Baire and Cantor spaces equivalence relations and their Borel reducibility The study shows that the descriptive set theory looks very different in this generalized setting compared to the classical countable case They also draw the connection between the stability theoretic complexity of first order theories and the descriptive set theoretic complexity of their isomorphism relations The authors results suggest that Borel reducibility on uncountable structures is a model theoretically natural way to compare the complexity of isomorphism relations

behind the creation of the Bolshoi's repertoire and the Soviet leadership's objectives and interpretation of the tour's success as well as American response to the tour. The repertoire included the four ballets *Romeo and Juliet*, *Swan Lake*, *Giselle*, and *The Stone Flower* and two Highlights Programs which included excerpts from various pre and post revolutionary ballets, operas, and dance suites. How the Americans and the Soviets understood the Bolshoi's success provides insight into how each side conceptualized the role of the arts in society and in political transformation.
