Shadow Libraries Joe Karaganis, 2018-05-04 How students get the materials they need as opportunities for higher education expand but funding shrinks From the top down Shadow Libraries explores the institutions that shape the provision of educational materials from the formal sector of universities and publishers to the broadly informal ones organized by faculty copy shops student unions and students themselves It looks at the history of policy battles over access to education in the post World War II era and at the narrower versions that have played out in relation to research and textbooks from library policies to book subsidies to more recently the several open publication models that have emerged in the higher education sector From the bottom up Shadow Libraries explores how simply students get the materials they need It maps the ubiquitous practice of photocopying and what are in many cases the more marginal ones of buying books visiting libraries and downloading from unauthorized sources It looks at the informal networks that emerge in many contexts to share materials from face to face student networks to Facebook groups and at the processes that lead to the consolidation of some of those efforts into more organized archives that circulate offline and sometimes online the shadow libraries of the title If Alexandra Elbakyan's Sci Hub is the largest of these efforts to date the more characteristic part of her story is the prologue the personal struggle to participate in global scientific and educational communities and the recourse to a wide array of ad hoc strategies and networks when formal authorized means are lacking If Elbakyan's story has struck a chord it is in part because it brings this contradiction in the academic project into sharp relief universalist in principle and unequal in practice Shadow Libraries is a study of that tension in the digital era Contributors Bal zs Bod Laura Czerniewicz Mirosław Filiciak Mariana Fossatti Jorge Gemetto Eve Gray Evelin Heidel Joe Karaganis Lawrence Liang Pedro Mizukami Jhessica Reia Alek Tarkowski **Textbook of Biochemistry for Medical Students** D M Vasudevan, Sreekumari S, Kannan

Omorodion, 2017-11-14 This book subtitled The Chemistry of Initiation of Non Ringed Compounds Monomers is the second Volume Vol II of the book titled The New Frontiers in Sciences Engineering and the Arts For a compound to undergo Initiation it must be such that has what is called Activation center s wherein there are three kinds of many types When such compounds are activated they can be made to undergo either polymeric or chemical reactions When made to undergo polymeric reactions the compounds are said to be Addition monomers It is only when the Initiation Step is favoured by the monomer using an Initiator that the Propagation Step begins just as when a child is born into our world the child begins to grow If the Initiation Step is not favoured due to presence of what are called Transfer Species then chemical reactions take place to give non polymeric products under Equilibrium mechanism conditions There are different kinds and types of Transfer Species They are so important to the point where they indeed embrace the first law in Chemistry that which has been called The law of Conservation of transfer of transfer species almost analogous to the Conservation laws in Engineering Based on this law so many new concepts too countless to list were identified How some compounds monomers rearrange to give other compounds monomers via different kinds of phenomena all new to Present day Science have been identified So also are the concepts of Resonance Stabilization which was thought to take place chargedly something very impossible There are also many monomers which Present day Science activate chargedly things all found to be impossible Indeed as has been said all chemical reactions take place only radically while only some polymeric reactions take place chargedly in view of the types of mechanisms involved Different families of compounds monomers with activation centers both known and unknown olefinic and non olefinic were considered providing their chemical behaviours under different operating conditions based on the New Science Unlike what is known in Present day Science there are Males called Electrophiles and Females called Nucleophiles compounds monomers indeed more of Females than Males While Males carry at least two different types of Activation

centers cumulatively or conjugatedly placed Females carry one two or more same types of activation centers How these monomers all coming from different family trees favour the routes favoured by them have been shown even to the point where some which could not be polymerized by Present day Science can now be polymerized For the first time one has shown what the Hydrocarbon family tree looks like In view of the absence of hetero atoms in the tree there are no Males for those that carry Activation centers For the first time Azo compounds including hydrocarbons have been renamed and reclassified How they decompose when catalyzed and non catalyzed have begun to be shown They are important because from there one began to distinguish between surface and laboratory or industrial chemistry For the first time one showed how membranes can be obtained from chitins So also one has shown how the oxidation of ortho xylene which Present day Science thought was also combustion to give phthalic anhydride using vanadium pentoxide takes place From all indications a new science has emerged
