Approaches to Organizational Project Management Research Nathalie Drouin, Ralf Müller, Shankar Sankaran, 2013 Project management PM traditionally employed to implement projects has developed into Organizational Project Management as organizations are increasingly using projects to deliver strategies The emergence of program and portfolio management has also contributed to this move PM researchers need to become more innovative in their research approaches They need to connect with the broader currents of social science in relevant fields such as organization theory Outside the specific field there is a great deal that can usefully be imported transformed and translated so that it is fit for project management research purposes More trans disciplinary translational and transformational approaches for conducting project related research are required and this book goes a long way to providing foundations for them The book encompasses

reflections on fundamental questions underlying any research such as the type of knowledge sought as well as the epistemological and ontological assumptions. It broadens research methods and theory perspectives drawing on contemporary approaches such as action research, soft systems methodology, activity theory, actor network theory and other approaches adopted in related scientific and technological areas that are only recently being adopted. To achieve this, the book's editors have necessarily been eclectically interdisciplinary in their contributor list. They have included contemporary research methods and designs from areas allied to project research such as organization science, organizational studies, sociology, behavioral science and biology, providing innovative invitations to research design and methodological choice. Overall, this book makes a significant contribution to the maturation and development of project management research as a specialty in the broader social sciences, one that is a less reliant handmaiden or under laborer to purely technical issues but which appreciates that any material construction is always a social construction as well, one that implies episteme and phronesis, knowledge and wisdom as well as techne or technique. Project managers may not realize it, but the most important aspects of what they manage are the meanings, interpretations and politics of projects and not merely the technical aspects.

Project Portfolio Management, Second Edition Clive N. Enoch, 2019-02-13. The focus of this book is aimed at providing a mechanism to determine the individual and cumulative contribution of portfolio components to strategic objectives so that the right decisions can be made regarding those components. Project portfolio management (PfM) is a critically important discipline which organizations must embrace in order to extract the maximum value from their project investments. Essentially, PfM can be defined as the translation of strategy and organizational objectives into projects, programs and operations, portfolio components, the allocation of resources to portfolio components according to organizational priorities, alignment of components to one or more organizational objectives and the management and control of these components in order to achieve organizational objectives and benefits. The interest and contribution to the body of knowledge in project portfolio management has been growing significantly in recent years; however, a particular area of concern is the decision making during the management of the portfolio regarding which portfolio components to accelerate, suspend or terminate. Failing to determine how the individual and cumulative components of a portfolio contribute to an organization's strategic objectives leads to poorly informed decisions that negate the positive effect that a sound understanding of project portfolio management could have in an organization.

Strategic Integrated Program Delivery Mark Betts, Peter E.D. Love, Derek H.T. Walker, 2024-12-04. This book outlines a cutting edge form of program delivery which the authors term SIP Form or Strategic Integrated Program delivery. Using the Melbourne Level Crossing Removal Program (LXRP) consisting of the removal of 85 dangerous level crossings throughout metropolitan Melbourne including rail station upgrades, signalling and track work and other associated capital works as an exemplar, the book sets out four features that

the authors argue define the SIP form concept as follows The organisation delivers a program of projects many using an IPD contract variant form such as a Project Alliance Agreement PAA in Australia and numerous other countries or the Integrated Form of Agreement IFoA in North America The contract form adopted is used and has been strategically designed to accommodate the project s risk and uncertainty profile as is the case with the LXP Projects within the program are integrated with some being concurrently delivered with coordination across the projects in a coherent and highly purposeful manner Projects are not included that do not strategically fit the overall program delivery strategy There is a strategy for learning and innovation diffusion across projects concurrently and sequentially Lessons to be learned are learned through designed in governance mechanisms The LXP is a potentially unique program of projects and the book takes the reader on a journey through this complex program and after giving the background and relevant context covers topics such as strategy governance procurement collaboration program alliance HRM leadership digital innovation continuous improvement community engagement and performance measurement This detailed analysis of such a complex program of projects makes this book essential reading for project managers engineers and advanced students of project delivery and management
