Statistical Methods in Spatial Epidemiology Andrew B. Lawson, 2013-07-08 Spatial epidemiology is the description and analysis of the geographical distribution of disease It is more important now than ever with modern threats such as bio terrorism making such analysis even more complex This second edition of Statistical Methods in Spatial Epidemiology is updated and expanded to offer a complete coverage of the analysis and application of spatial statistical methods The book is

divided into two main sections Part 1 introduces basic definitions and terminology along with map construction and some basic models This is expanded upon in Part II by applying this knowledge to the fundamental problems within spatial epidemiology such as disease mapping ecological analysis disease clustering bio terrorism space time analysis surveillance and infectious disease modelling Provides a comprehensive overview of the main statistical methods used in spatial epidemiology Updated to include a new emphasis on bio terrorism and disease surveillance Emphasizes the importance of space time modelling and outlines the practical application of the method Discusses the wide range of software available for analyzing spatial data including WinBUGS SaTScan and R and features an accompanying website hosting related software Contains numerous data sets each representing a different approach to the analysis and provides an insight into various modelling techniques This text is primarily aimed at medical statisticians researchers and practitioners from public health and epidemiology It is also suitable for postgraduate students of statistics and epidemiology as well professionals working in government agencies

Matrix-Based Introduction to Multivariate Data Analysis Kohei Adachi, 2016-10-11 This book enables readers who may not be familiar with matrices to understand a variety of multivariate analysis procedures in matrix forms Another feature of the book is that it emphasizes what model underlies a procedure and what objective function is optimized for fitting the model to data The author believes that the matrix based learning of such models and objective functions is the fastest way to comprehend multivariate data analysis The text is arranged so that readers can intuitively capture the purposes for which multivariate analysis procedures are utilized plain explanations of the purposes with numerical examples precede mathematical descriptions in almost every chapter This volume is appropriate for undergraduate students who already have studied introductory statistics Graduate students and researchers who are not familiar with matrix intensive formulations of multivariate data analysis will also find the book useful as it is based on modern matrix formulations with a special emphasis on singular value decomposition among theorems in matrix algebra The book begins with an explanation of fundamental matrix operations and the matrix expressions of elementary statistics followed by the introduction of popular multivariate procedures with advancing levels of matrix algebra chapter by chapter This organization of the book allows readers without knowledge of matrices to deepen their understanding of multivariate data analysis
