A Novel Intrabody Communication Transceiver for Biomedical Applications Mir Hojjat Seyedi,Daniel Lai,2016-11-08 This monograph explores Intrabody communication IBC as a novel non RF wireless data communication technique using the human body itself as the communication channel or transmission medium In particular the book

investigates Intrabody Communication considering limb joint effects within the transmission frequency range 0.3–200 MHz. Based on in vivo experiments which determine the effects of size, situations and locations of joints on the IBC, the book proposes a new IBC circuit model explaining elbow joint effects. This model not only takes the limb joint effects of the body into account but also considers the influence of measurement equipment in higher frequency band, thus predicting signal attenuation behavior over wider frequency ranges. Finally, this work proposes transmitter and receiver architectures for intrabody communication. A carrier free scheme based on impulse radio for the IBC is implemented on a FPGA.

Resistive, Capacitive, Inductive, and Magnetic Sensor Technologies Winncy Y. Du, 2014-12-09. Sensor technologies have experienced dramatic growth in recent years, making a significant impact on national security, health care, environmental improvement, energy management, food safety, construction monitoring, manufacturing and process control, and more. However, education on sensor technologies has not kept pace with this rapid development. Until now, *Resistive Capacitive Inductive and Magnetic Sensor Technologies* examines existing new and novel sensor technologies and, through real world examples, sample problems and practical exercises, illustrates how the related science and engineering principles can be applied across multiple disciplines, offering greater insight into various sensors, operating mechanisms and practical functions. The book assists readers in understanding resistive, capacitive, inductive and magnetic RCIM sensors as well as sensors with similar design concepts, characteristics and circuitry. *Resistive Capacitive Inductive and Magnetic Sensor Technologies* is a complete and comprehensive overview of RCIM sensing technologies. It takes a unique approach in describing a broad range of sensing technologies and their diverse applications by first reviewing the necessary physics and then explaining the sensors' intrinsic mechanisms, distinctive designs, materials and manufacturing methods, associated noise types, signal conditioning circuitry and practical applications. The text not only covers silicon and metallic sensors but also those made of modern and specialized materials such as ceramics, polymers and organic substances. It provides cutting edge information useful to students, researchers, scientists and practicing professionals involved in the design and application of sensor based products in fields such as biomedical engineering, mechatronics, robotics, aerospace and beyond.
