

CHANGING THE SHELL PLATE CARRIER

- 1 Remove turret, primer tray and z-bar
- 2 Loosen allen screw clamp
- 3 Place wood block under carrier
- 4 Use lever to pull ram out of carrier

INSTALLING THE SHELL PLATE CARRIER

The carrier is attached to the ram with a single socket head screw. This makes it very easy to change the entire carrier for caliber changing.

- 1 Push the action rod through the carrier from the bottom side until the end slightly protrudes through the top. Be sure the twisted end is down.

- 2 Insert the assembly from the front of the press until it contacts the press in three places as shown.
- 3 Push the action rod up through the top of the press and continue rotation to level position. Be sure to keep the primer trough pin behind the right rear column.
- 4 Push the assembly onto the ram's end. Tighten the clamp screw with a hex wrench. **DO NOT OVERTIGHTEN.**

CHANGING SHELL PLATE ONLY

- 1 With the shell holder carrier free of the press, loosen the screw that holds the ejector and remove the ejector. **DON'T LOSE IT!**
- 2 Using a 1/4" hex wrench, turn the drive bolt clockwise to thread it out of the shell plate. You must hold the shell plate from turning while doing this. A 3/16" hex wrench or small screwdriver through the plate in the depriming position works well.
- 3 If changing primer size, be sure to change the primer trough and primer punch before installing a new shell plate.

- 4 Be careful to not lose the 3/8" steel detent ball and spring. Also, be careful not to bend the spring fingers that hold the cases in the shell plate.
- 5 Reassemble the unit and readjust the zero index as explained under "Zero Adjustment" on next page.

DO NOT OVERTIGHTEN THE DRIVE BOLT. Turn until snug, using a single finger. **DRIVE BOLT** is easily user damaged by overtightening or turning in wrong direction.
