Advances in Harvest and Post-Harvest Technology of Fishes D.D. Nambudiri, 2012-01-15 In recent years there have been notable advances in the fisheries. Progresses made in refinements of vessels, new line materials and line handling systems preserving the catch, the availability of oceanographic sensor equipments and the utilization of satellite technology to locate potential fishing grounds have greatly improved the fishing power of longline vessels. Post harvest technology of fish has evolved in the last one decade to a more energy efficient, cost effective and quality upgrading technology. Since fresh fish can get spoiled very quickly, the development of technology for post harvest preservation and methodology to convert fish to value added products have also become popular in recent times. Value addition helps in getting high price for the fishery products. There is a need to develop competent human resources in the field of post harvest management of fish and production of value added products from them. It is required to inculcate vocational and entrepreneurial skills in order to widen employment opportunities particularly among rural youth and the disadvantaged sections of the society as well as to enable self employment.

Bureau of Commercial Fisheries, 1940 **Geography of British Columbia, 2nd ed.** Brett McGillivray, 2011-11 Why is British Columbia unique within Canada? What physical processes have made this province so rugged and produced such remarkable variation in climate and vegetation? Why did non-Natives come to British Columbia and what impact did they have on First Nations? Why did so many Asian immigrants come to this province and then leave for other parts of Canada? How were resources developed in the past and how are those resources developed today? Geography of British Columbia discusses these and many other aspects of the growth of this distinctive province. Brett McGillivray focuses first on the combination of physical processes that produced a spectacular variety of mountains, rivers, lakes, islands, fjords, forests and minerals, explaining the forces that created the province and the natural hazards that can reshape it. A concise examination of B.C. historical geography follows, covering First Nations ways of life, colonization, Asian immigration and the sad history of institutionalized racism. The second half of the book contains a detailed description of the economic geography of the province with chapters on forestry, the salmon fishery, metal mining, energy supply and demand, agriculture, water and the tourism industry. It addresses the present day issues of urbanization, economic development and resource management.
