- The MS normally operates on its home PLMN (HPLMN) or equivalent home PLMN (EHPLMN). However, a visited PLMN (VPLMN) may be selected, e.g., if the MS loses coverage. There are two modes for PLMN selection:
 - i) Automatic mode - This mode utilizes a list of PLMN/access technology combinations in priority order. The highest priority PLMN/access technology combination which is available and allowable is selected.
 - ii) **Manual mode** - Here the MS indicates to the user which PLMNs are available. Only when the user makes a manual selection does the MS try to obtain normal service on the VPLMN.

Evolution of 3G Networks Gottfried Punz,2009-12-16 In this chapter we describe the motivation for writing this book and explain its scope Some remarks on nomenclature are given in order to help the reader with a fast and easy start The concept and structure of the material compiled is presented followed by some hints on how to make best use of it Finally the status of standardization on which this book is based is described 1 1

Motivation Probably the main motivation for starting to draft the script for this book and eventually to finish it was the desire to have a more or less complete up to date overview of mobile network technology for myself not only when starting my work in 3GPP standardization but also continuously afterwards I realized that some of my colleagues were in search of the same and I extrapolated to the point where after 3G technology is in in the field for some time the huge new step of development would be implemented and finally exist in reality a manifold of system designers SW engineers solution consultants test personnel field technicians and service staff would have to deal with the underlying architecture concepts and detailed procedures Yet I noticed in my roughly two decades of work as an engineer in a few diverse fields that compact consistent and balanced overview material suitable for the wider audience is scarce

Radio Access Networks for UMTS

Chris Johnson, 2011-08-24 This book provides a comprehensive description of Radio Access Networks for UMTS. The main content is based upon the release 6 version of the 3GPP specifications. Changes since the release 99 version are described while some of the new features from the release 7 version are introduced. Starting from the high level network architecture the first sections describe the flow of data between the network and end user. This includes a dedicated chapter describing the Iub transport network. Detailed descriptions of both HSDPA and HSUPA reflect the increasing importance of efficient high data rate connections. Signalling procedures are described for speech, video and PS data connection establishment, SMS, data transfer, soft handover and inter system handover. The more practical subjects of link budgets and radio network planning are also addressed. More than 180 example log files reinforce the reader's understanding. Summary bullet points allow rapid access to the most important information. Focus upon how data is transferred between the network and end user. Dedicated chapters provide detailed descriptions of both HSDPA and HSUPA. Step by step analysis of common signalling procedures. Key radio network planning subjects addressed. Radio Access Networks for UMTS is ideal for mobile telecommunications engineers working for equipment vendors, operators and regulators. It will also appeal to system designers, technical managers and students.

EDGE for Mobile Internet Emmanuel Seurre, Patrick Savelli, Pierre-Jean Pietri, 2003 This ground breaking resource offers you a detailed treatment of EDGE and its critical role in the development of the mobile Internet. The book explains how this global radio based high speed mobile data standard can be introduced into GSM GPRS networks improving data transmission speeds to support multimedia services. It enables you to become thoroughly knowledgeable of EDGE specifications and covers concepts pertaining to several domains including RF signal processing, digital communications and communication networks.

Radio Resource Management Strategies in UMTS Jordi Perez Romero, Oriol Sallent, Ramon Agusti, Miguel Angel Diaz-Guerra, 2005-10-31 The key feature of future mobile communication systems is the ability to deliver wideband and high bit rate multimedia services alongside the traditional radio services such as voice, messaging and slow rate data. The broad range of services expected to be supported can be divided into different Quality of Service (QoS) classes. However the provision of such mobile multimedia services under QoS guarantees will not be possible without a utilization of the air interface resources by means of Radio Resource Management (RRM) strategies that ensure the target QoS, the planned coverage area and that offer a high system capacity. Under this framework the book focuses on the RRM concepts including the theoretical background that serves as a basis for the description of specific RRM algorithms. The RRM problem for UMTS is presented and more specifically for the FDD mode which is based on a WCDMA scheme. More specifically the different aspects that are covered include: Introduces the mobile communications sector and UMTS including the evolution towards 4G systems with an overview of the QoS concept which is key for the definition of RRM strategies. Offers a detailed description of the radio interface in UMTS as the basis for the implementation of RRM strategies. Provides the fundamental concepts related with the development of RRM strategies in

WCDMA networks Analyses particular RRM algorithms in a variety of scenarios trying to identify the key parameters and factors that influence their performance Explores the evolution of UMTS towards Beyond 3G systems and the concept of Common RRM in heterogeneous networks with the aid of some algorithm examples This comprehensive title is essential reading for engineers and managers in radio engineering departments of UMTS network operators and UMTS equipment manufacturers It will also prove insightful to researchers in the field of 3G and Beyond 3G systems and academics in any of these areas
