Mathematics June 2013 Paper Memo:

Cognitive Communication and Cooperative HetNet Coexistence Maria-Gabriella Di Benedetto, Faouzi

Bader, 2014-01-16 This book written by experts from universities and major industrial research laboratories is devoted to the very hot topic of cognitive radio and networking for cooperative coexistence of heterogeneous wireless networks. Selected highly relevant advanced research is presented on spectrum sensing and progress toward the realization of accurate radio environment mapping, biomimetic learning for self-organizing networks, security threats with a special focus on primary user emulation attack and cognition as a tool for green next generation networks. The research activities covered include work undertaken within the framework of the European COST Action IC0902 which is geared towards the definition of a European platform for cognitive radio and networks. Communications engineers, R D engineers, researchers and students will all benefit from this complete reference on recent advances in wireless communications and the design and implementation of cognitive radio systems and networks. **Global Flood Hazard** Guy J-P. Schumann, Paul D. Bates, Heiko Apel, Giuseppe T.

Aronica, 2018-06-05 Global Flood Hazard Subject Category Winner PROSE Awards 2019 Earth Science. Selected from more than 500 entries demonstrating exceptional scholarship and making a significant contribution to the field of study. Flooding is a costly natural disaster in terms of damage to land property and infrastructure. This volume describes the latest tools and technologies for modeling, mapping and predicting large scale flood risk. It also presents readers with a range of remote sensing data sets successfully used for predicting and mapping floods at different scales. These resources can enable policymakers, public planners and developers to plan for and respond to flooding with greater accuracy and effectiveness. Describes the latest large scale modeling approaches including hydrological models, 2 D flood inundation models and global flood forecasting models. Showcases new tools and technologies such as Aqueduct, a new web based tool used for global assessment and projection of future flood risk under climate change scenarios. Features case studies describing best practice uses of modeling techniques, tools and technologies. Global Flood Hazard is an indispensable resource for researchers, consultants, practitioners and policy makers dealing with flood risk, flood disaster response, flood management and flood mitigation. *A Complete Classification of the Isolated Singularities for Nonlinear Elliptic Equations with Inverse Square Potentials* Florica C. Cîrstea, 2014-01-08 In particular for $b = 1$ and 0 we find a sharp condition on h such that the origin is a removable singularity for all non negative solutions of $\Delta u = h|u|^{p-2}u$ thus addressing an open question of Vazquez and Vron.

Hello World Hannah Fry, 2018-09-18 Shortlisted for the 2018 Baillie Gifford Prize and the 2018 Royal Society Investment Science Book Prize. A beautifully accessible guide. One of the best books yet written on data and algorithms. Times UK. If you were accused of a crime, who would you rather decide your sentence: a mathematically consistent algorithm incapable of empathy, or a compassionate human judge prone to bias and error? What if you want to buy a driverless car and must choose between one programmed to save as many lives as possible and another that prioritizes the lives of its own passengers? And

would you agree to share your family's full medical history if you were told that it would help researchers find a cure for cancer? These are just some of the dilemmas that we are beginning to face as we approach the age of the algorithm when it feels as if the machines reign supreme. Already these lines of code are telling us what to watch, where to go, whom to date and even whom to send to jail. But as we rely on algorithms to automate big important decisions in crime, justice, healthcare, transportation and money, they raise questions about what we want our world to look like. What matters most? Helping doctors with diagnosis or preserving privacy? Protecting victims of crime or preventing innocent people being falsely accused? Hello World takes us on a tour through the good, the bad and the downright ugly of the algorithms that surround us on a daily basis. Mathematician Hannah Fry reveals their inner workings, showing us how algorithms are written and implemented and demonstrates the ways in which human bias can literally be written into the code. By weaving in relatable real world stories with accessible explanations of the underlying mathematics that power algorithms, Hello World helps us to determine their power, expose their limitations and examine whether they really are an improvement on the human systems they replace.

Minimum Deterrence: Examining the Evidence Keith B. Payne, James Schlesinger, 2016-04-14 The National Institute for Public Policy's new book *Minimum Deterrence: Examining the Evidence* is the first of its kind. Dr. Keith Payne, former Secretary of Defense, James Schlesinger, and an unparalleled bipartisan group of senior civilian and military experts critically examine eight basic assumptions of Minimum Deterrence against available evidence. In general, Minimum Deterrence does not fare well under the careful scrutiny. Proponents of a Minimum Deterrent US nuclear force posture believe that anywhere from a handful to a few hundred nuclear weapons are adequate to deter reliably and predictably any enemy from attacking the United States now and in the future. Because nuclear weapons are so destructive, their thinking goes, no foreign leader would dare challenge US capabilities. The benefits advocates claim of reducing US nuclear weapons to the minimum level needed are better relations with Russia and China, reinforcement of the arms control and Nonproliferation Treaty, billions of defense dollars in savings and greater international stability on the way to nuclear zero. As political pressure builds to pursue this vision of minimum US deterrence, *Minimum Deterrence: Examining the Evidence* stands as the seminal study to address the many claims of great benefit using available evidence. This book was published as a special issue of *Comparative Strategy*.

Federal Register, 2013-06 [Making Education Work for the Poor](#) William Elliott, Melinda Lewis, 2018-07-03 *Making Education Work for the Poor* identifies wealth inequality as the gravest threat to the American education system. Today, wealth rather than individual effort and ability determines educational outcomes. This book calls for universal Opportunity Investment Accounts to be the cornerstone of the wealth-building agenda; the nation needs to salvage the American Dream.

Proof of the 1-Factorization and Hamilton Decomposition Conjectures Béla Csaba, Daniela Kühn, Allan Lo, Deryk Osthus, Andrew Treglown, 2016-10-05 In this paper, the authors prove the following results via a unified approach for all sufficiently large n : 1. Factorization conjecture: Suppose that n is even and $D \geq n/4 - 1$. Then every D -regular graph G on n

vertices has a decomposition into perfect matchings Equivalently G is Hamiltonian decomposition conjecture Suppose that $D \leq n/2$ Then every D -regular graph G on n vertices has a decomposition into Hamilton cycles and at most one perfect matching iii Optimal packings of Hamilton cycles Suppose that G is a graph on n vertices with minimum degree $n/2$ Then G contains at least $\text{regeven } n/2 \cdot n/2 \cdot 8$ edge disjoint Hamilton cycles Here $\text{regeven } n$ denotes the degree of the largest even regular spanning subgraph one can guarantee in a graph on n vertices with minimum degree i was first explicitly stated by Chetwynd and Hilton ii and the special case $n/2$ of iii answer questions of Nash Williams from 1970 All of the above bounds are best possible
