

Medical Surgical test bank Exam 1 Chapter 17 (179 Questions, Answers and Rationales)

Exam 1 - fluid and electrolytes
acid base
thermoregulation

Chapter 17: Fluid, Electrolyte, and Acid-Base Imbalances

1. The nurse obtains all of the following assessment data about a patient with deficient fluid volume caused by a massive burn injury. Which of the following assessment data will be of greatest concern?

a.

The blood pressure is 90/40 mm Hg.

b.

Urine output is 30 ml over the last hour.

c.

Oral fluid intake is 100 ml for the last 8 hours.

d.

There is prolonged skin tenting over the sternum. - **Correct answer** The blood pressure is 90/40 mm Hg.

Rationale: The blood pressure indicates that the patient may be developing hypovolemic shock as a result of fluid loss. This will require immediate intervention to prevent the complications associated with systemic hypoperfusion. The poor oral intake, decreased urine output, and skin tenting all indicate the need for increasing the patient's fluid intake but not as urgently as the hypotension.
