Akhtar, Mallappa Kumara Swamy, 2018-06-29 Cancer is one of the leading death cause of human population increasingly seen in recent times Plants have been used for medicinal purposes since immemorial times Though several synthetic medicines are useful in treating cancer they are inefficient and unsafe However plants have proved to be useful in cancer cure Moreover natural compounds from plants and their derivatives are safe and effective in treatment and management of several cancer types The anticancer plants such as Catharanthus roseus Podophyllum peltatum Taxus brevifolia Camptotheca acuminata Andrographis paniculata Crateva nurvala Croton tonkinensis Oplopanax horridus etc are important source of chemotherapeutic compounds These plants have proven their significance in the treatment of cancer and various other infectious diseases Nowadays several well known anticancer compounds such as taxol podophyllotoxins camptothecin vinblastine vincristine homoharringtonine etc have been isolated and purified from these medicinal plants Many of them are used effectively to combat cancer and other related diseases The herbal medicine and their products are the most suitable and safe to be used as an alternative medicine Based on their traditional uses and experimental evidences the anticancer

products or compounds are isolated or extracted from the medicinally important plants. Many of these anticancer plants have become endangered due to ruthless harvesting in nature. Hence there is a need to conserve these species and to propagate them in large scale using plant tissue culture. Alternatively, plant cell tissue and organ culture biotechnology can be adopted to produce these anticancer compounds without cultivation. The proper knowledge and exploration of these isolated molecules or products could provide an alternative source to reduce cancer risk, anti-tumorigenic properties and suppression of carcinogen activities. *Anticancer plants Volume 1: Properties and Application* is a very timely effort in this direction. Discussing the various types of anticancer plants as a source of curative agent, their pharmacological and nutraceutical properties, cryo-preservations and recent trends to understand the basic cause and consequences involved in the diseases diagnosis. We acknowledge the publisher Springer for their continuous inspiration and valuable suggestions to improve the content of this book. We further extend our heartfelt gratitude to all our book contributors for their support and assistance to complete this assignment. I am sure that these books will benefit the scientific communities including academics, pharmaceuticals, nutraceuticals and medical practitioners.

*Medicinal Plant Research in Africa* Victor Kuete, 2025-04-16

*Medicinal Plant Research in Africa* second edition is an updated and complete reference on the pharmacology of most relevant African species and their phytochemical properties. Although pharmacopoeias of most African countries are available and contain an impressive number of medicinal plants used for various therapeutic purposes, however, there was no global standard book on the nature and specificity of chemicals isolated in African medicinal plants. This book has set the standard when it first published in 2013 and now is updated with novel phytochemicals belonging to diverse classes of terpenoids, phenolics and alkaloids. The first chapter covers monoterpenes and related phytochemicals and is followed by sesquiterpenes on chapter two. Chapter three reviews diterpenoids and chapter four provides an overview of triterpenes and steroids. Essential oils, simple phenols, phenolic acids and related esters come next in chapters five and six respectively. The following chapters cover coumarins, flavonoids, quinones, xanthenes, lignans and stilbenes, Tannins, alkaloids and ceramides. Chapters 15 to 20 focus on specific health conditions starting with antibiotic infection, antimalarial and other antiprotozoal diseases, cytotoxic and anticancer activity, anti-inflammatory and analgesic action, antidiabetic botanicals and the applications of African plant phytochemicals on reproductive, cardiovascular and central nervous systems conditions. The final chapter covers the market and industry updates since the first edition published. *Medicinal Plant Research in Africa 2 Ed* provides a complete overview of the main phytochemical principles present in the African flora and their pharmaceutical use. Pharmaceutical scientists, Ethnopharmacists, botanists and medicinal chemists will benefit from the content organization and the inclusion of the most recent methods for structural identification of phytochemicals, pharmacological techniques and data interpretation. Covers novel chemical structures and new pharmacological data. Highlights how phytochemicals can help overcome drug resistance.
