

This document is an introduction to Microsoft Access 2010, running under Microsoft Windows XP. For further information see [Microsoft Access 2010 - An Intermediate Guide](#).

Introduction

A database is a computer program for storing information in an easily retrievable form. It is used mainly to store text and numbers (for example, the Library catalogue, which includes the author, title, class number and accession number for each book).

Most modern databases also allow the storage of other types of information such as dates, hyperlinks, pictures and sounds. As well as being able to store data, a database allows you to select information quickly and easily (for example, a list of the books written by a particular author or those on a certain subject). Finally, it may allow you to produce printed summaries (reports) of the information selected.

When setting up your own database, it is important to plan its use in advance. This is particularly important if you are setting one up which will be used by other people. Among the things which you should consider are:

- What information you will need to store
- What information you want to get out
- Who the data is intended for and how other users will use it
- Whether you want to restrict access to parts of the data to some users only
- Who is allowed to add or change data
- If your data refers to actual people, it may need to be registered under the Data Protection Act (though this doesn't apply to a personal database of family and friends)

Although you can change the specifications of your database as you develop it, you will save yourself a lot of work if as much as possible is planned in advance.

Microsoft Access is a relational database management system (which allows you to link together data stored in more than one table). It is fully supported by IT Services and is available for personal purchase as part of the Ultimate Steel and for departmental installation under the Microsoft Select Agreement.

Starting Microsoft Access

If you are using an IT Services machine, login as usual by entering your *username* and *password*. Then, to start up the program:

1. Open the Windows **Start** button and choose **All Programs**.
2. Select **Microsoft Office** then **Microsoft Access 2010**.

Tip: If you right click on the **Microsoft Access** entry in the menu and choose **Send To then Desktop (create shortcut)** you'll have an icon on the Desktop for future easy access. You can also do this with any Access file.

The Access Screen

On entering Access you are presented with a screen showing available templates, which have been designed to help you create your own databases. You can search for further templates at Office.com. These templates can be quite helpful for particular applications but you nearly always have to tailor the database produced to your own requirements.

You can also either create a new blank database (without help) or open an existing one. In this course you are going to use an existing database, to see how it is set up and how it can be used.

Lightning Guide to Databases with Microsoft Access and SQL Arturo Azcorra, 2021-08-27

What is this Lightning Guide good for? The Lightning Guide to Databases with Microsoft Access and SQL is a fast and easy way to design your databases with Microsoft Access and using Structured Query Language SQL. It is very practical, based on learning by doing, using clear database examples. Very direct, goes straight to the point with a short and clear explanation of each topic. Each topic is later developed in deeper detail for those interested in learning more about it. Intended for all users from MS Access beginners to very experienced users. If you have some programming experience, you will make the most out of this guide, and experience with spreadsheets is also useful, but neither are necessary. Very broad, covers from the most basic questions about MS Access relational databases and SQL, such as what is a Table, to advanced features such as Forms, writing complex SQL Queries, Query testing and debugging guidance. How do you use this Lightning Guide? This Lightning Guide is not designed to be read linearly like a book, and it is not intended to be read in full, although you can do both. Rather, it is written as a long list of Frequently Asked Questions, where each short section addresses a specific topic. You can just read the section or sections that are useful for you at any given moment. To easily find the solution to your specific doubt or question, this Lightning Guide is structured in short sections, each attempting to be reasonably self-contained and answering a specific question/problem that you may have. Sections include cross-references to other sections, allowing you to follow up on the explanation of topics in other related sections in case you want to dig in. There is also some redundancy between sections for the sake of self-containment, making it easier to find the desired answer as fast as possible. I therefore recommend using this Guide by searching for the specific question/problem that you have and going directly to the corresponding section.

What version of Microsoft Access is this Guide for? Microsoft Access MS Access is a computer program for building, maintaining, and using relational databases. The explanation of the user interface and the exercises in this guide are for the 2021 English version of MS Access 365, which is very similar to MS Access 2019 and to MS Access 2016. Besides, many of the concepts explained in this book are version-independent and apply to database design and database concepts themselves, being equally applicable to past and future versions.

What is not in this Guide? This Lightning Guide explains in a clear, concise, and detailed way almost all MS Access features and commands, which will allow you to exploit MS Access in great depth. However, be aware this Guide covers Reports very lightly and does not cover macros. I would also like to clarify that this guide does not cover how to program in VBA. It explains how to use VBA code in MS Access and how VBA data types interact with SQL ones, but it does not provide a course on how to program in VBA. In case that you know some other imperative programming language like C or Java, you will find VBA straightforward and will be able to code with it very fast, using a few tips from web pages.
