Middleware 2000 Joseph Sventek, Geoffrey Coulson, 2003-06-29 Middleware is everywhere Ever since the advent of sockets and other virtual circuit abstractions researchers have been looking for ways to incorporate high value concepts into distributed systems platforms Most distributed applications especially Internet applications are now programmed using such middleware platforms Prior to 1998 there were several major conferences and workshops at which research into middleware was reported including ICODP International Conference on Open Distributed Processing ICDP International Conference on Distributed Platforms and SDNE Services in Distributed and Networked environments Middleware 98 was a synthesis of these three conferences Middleware 2000 continued the excellent tradition of Middleware 98 It provided a single venue for reporting state of the art results in the provision of distributed systems platforms The focus of Middleware 2000 was the design implementation deployment and evaluation of distributed systems platforms and architectures for future networked environments Among the 70 initial submissions to Middleware 2000 21 papers were selected for inclusion in the technical program of the conference Every paper was reviewed by four members of the program committee The papers were judged according to their originality presentation quality and relevance to the conference topics The accepted papers cover various subjects such as caching reflection quality of service and transactions *Computer Networks and Internets* Douglas Comer, 2004 Now with a new chapter on long distance digital circuits and wireless technologies this book offers a comprehensive self contained tour through the world of networking *Enabling Technologies for Computational Science* Elias N. Houstis, John R. Rice, Efstratios Gallopoulos, Randall Bramley, 2012-12-06 Enabling Technologies for Computational Science assesses future application computing needs identifies research directions in problem solving environments PSEs addresses multi disciplinary environments operating on the Web proposes methodologies and software architectures for building adaptive and human centered PSEs and describes the role of symbolic computing in scientific and engineering PSEs The book also includes an extensive bibliography of over 400 references Enabling Technologies for Computational Science illustrates the extremely broad and interdisciplinary nature of the creation and application of PSEs Authors represent academia government laboratories and industry and come from eight distinct disciplines chemical engineering computer science ecology electrical engineering mathematics mechanical engineering psychology and wood sciences This breadth and diversity extends into the computer science aspects of PSEs These papers deal with topics such as artificial intelligence computer human interaction control data mining graphics language design and implementation networking numerical analysis performance evaluation and symbolic computing Enabling Technologies for Computational Science provides an assessment of the state of the art and a road map to the future in the area of problem solving environments for scientific computing This book is suitable as a reference for scientists from a variety of disciplines interested in using PSEs for their research *Computer Network Security* Vladimir Gorodetsky, Igor Kottenko, Victor Skormin, 2005-09-19 This volume contains

papers presented at the 3rd International Workshop on Mathematical Methods Models and Architectures for Computer Network Security MMM ACNS 2005 held in St Petersburg Russia during September 25-27 2005 The workshop was organized by the St Petersburg Institute for Informatics and Automation of the Russian Academy of Sciences SPIIRAS in cooperation with Binghamton University SUNY USA The 1st and the 2nd International Workshops on Mathematical Methods Models and Architectures for Computer Network Security MMM ACNS 2001 and MMM ACNS 2003 hosted by the St Petersburg Institute for Informatics and Automation demonstrated the keen interest of the international research community in the subject area It was recognized that conducting a biannual series of such workshops in St Petersburg stimulates fruitful exchanges between the different schools of thought facilitates the dissemination of new ideas and promotes the spirit of cooperation between researchers on the international scale MMM ACNS 2005 provided an international forum for sharing original search results and application experiences among specialists in fundamental and applied problems of computer network security An important distinction of the workshop was its focus on mathematical aspects of information and computer network security addressing the ever increasing demands for secure computing and highly dependable computer networks

Middleware'98 Nigel Davies, Kerry Raymond, Jochen Seitz, 2012-12-06 Welcome to Middleware 98 and to one of England's most beautiful regions In recent years the distributed systems community has witnessed a growth in the number of conferences leading to difficulties in tracking the literature and a consequent loss of awareness of work done by others in this important field The aim of Middleware 98 is to synthesise many of the smaller workshops and conferences in this area bringing together research communities which were becoming fragmented The conference has been designed to maximise the experience for attendees This is reflected in the choice of a resort venue rather than a big city to ensure a strong focus on interaction with other distributed systems researchers The programme format incorporates a question and answer panel in each session enabling significant issues to be discussed in the context of related papers and presentations The invited speakers and tutorials are intended to not only inform the attendees but also to stimulate discussion and debate

Algorithms & Architectures For Parallel Processing, 4th Intl Conf Andrzej Marian Goscinski, Horace Ho Shing Ip, Wei-jia Jia, Wan Lei Zhou, 2000-11-24 ICA3PP 2000 was an important conference that brought together researchers and practitioners from academia industry and governments to advance the knowledge of parallel and distributed computing The proceedings constitute a well defined set of innovative research papers in two broad areas of parallel and distributed computing 1 architectures algorithms and networks 2 systems and applications

Semantic Management of Middleware Daniel Oberle, 2006-05-28 Current

middleware solutions e.g application servers and Web services are very complex software products that are hard to tame because of intricacies of distributed systems Their functionalities have mostly been developed and managed with the help of administration tools and corresponding configuration files recently in XML Though this constitutes flexibility for developing and administrating a distributed application the conceptual model underlying the different configurations is only implicit To remedy such problems Semantic Management of Middleware contributes an ontology based approach to support the development and administration of middleware based applications The ontology is an explicit conceptual model with formal logic based semantics Its descriptions may therefore be queried may foresight required actions or may be checked to avoid inconsistent system configurations This book builds a rigorous approach towards giving the declarative descriptions of components and services a well defined meaning by specifying ontological foundations and by showing how such foundations may be realized in practical up and running systems

Distributed Virtual Machines Gary J. Nutt, 2005 The Common Language Infrastructure CLI is a multiple language runtime system first implemented as the NET Common Language Runtime CLR In March 2002 Microsoft released the Shared Source CLI implementation aka Rotor for general educational use The CLI technology can be used to address a spectrum of software design and development barriers that cut across compilers runtime systems and operating systems This book focuses on the parts of the technology that are directly related to Distributed Virtual Machine technology It covers assembly architecture assembly loading downloading the execution engine security CLI interobject communication remoting and more This book is available entirely online at <http://www.bc.com/nutt/cli> for professor evaluation and classroom use and for general readers interested in the Rotor CLI
