Linking Habitat Quality to Population Dynamics for Conservation Decision Making David R. Breininger, Doug P. Armstrong, Robert C. Lacy, James Nichols, 2025-04-09 Endangered Species Recovery planning is often based on predictions from population models Species recovery is contingent on habitat restoration including reduction of threats such as predators and parasites However population predictions are rarely linked to habitat management meaning that management cannot be easily guided by most formal decision making frameworks Predicted recovery trajectories may depend not only on the type and extent of restoration but also the timing For example populations may initially continue to decline as habitat

restoration takes place and their genetic diversity might need to be maintained during that process There is also often considerable uncertainty about the effectiveness of proposed management in improving habitat quality and the effects of those improvements on population growth rates of the species targeted for recovery We seek examples of approaches integrating habitat restoration and population dynamics to guide decision making One example is where population data e g occupancy and habitat dynamics e g transition probabilities between states are directly integrated into a statistical likelihood Another uses a metamodel to combine different interdisciplinary models e g population habitat disease predator prey to represent a more complex system integrating the flow of information and sequences of events among models Decision frameworks to enhance species recovery could include management of relatively natural areas but also more intensively managed areas such as zoos or fragmented landscape with minimal long term conservation potential for some species Decision frameworks will ideally include adaptive management i e re current decisions recognizing that conservation decisions often need to begin imminently and that delaying action is a decision We invite articles that include several of the following elements in the context of conservation decision making Explaining why it is important to consider animal or plant population and habitat dynamics together Case studies models or other demonstrations of how habitat and population dynamics should or can be linked Examples may include remnant populations but also recent or prospective translocations Explicit or decision making approaches including adaptive management for linking habitat and populations for conservation to guide conservation Showing how loss of genetic variation in small populations can affect decisions given the time needed to restore habitat reduced toxins introduced predators disease Showing how variation in population and habitats over time and or space are important for decisions about species recovery

The Mathematics of Financial Modeling and Investment Management Sergio M. Focardi, Frank J. Fabozzi, CFA, 2004-03-29. The mathematics of financial modeling investment management. The Mathematics of Financial Modeling Investment Management covers a wide range of technical topics in mathematics and finance enabling the investment management practitioner, researcher or student to fully understand the process of financial decision making and its economic foundations. This comprehensive resource will introduce you to key mathematical techniques: matrix algebra, calculus, ordinary differential equations, probability theory, stochastic calculus, time series analysis, optimization as well as show you how these techniques are successfully implemented in the world of modern finance. Special emphasis is placed on the new mathematical tools that allow a deeper understanding of financial econometrics and financial economics. Recent advances in financial econometrics such as tools for estimating and representing the tails of the distributions, the analysis of correlation phenomena and dimensionality reduction through factor analysis and cointegration are discussed in depth. Using a wealth of real world examples, Focardi and Fabozzi simultaneously show both the mathematical techniques and the areas in finance where these techniques are applied. They also cover a variety of useful financial applications such as Arbitrage pricing, Interest rate modeling, Derivative pricing, Credit risk modeling, Equity and bond portfolio management, Risk management. And much more. Filled with in depth insight and expert advice. The Mathematics of Financial Modeling Investment Management clearly ties together financial theory and mathematical techniques.

Asymmetric Dependence in Finance Jamie Alcock, Stephen Satchell, 2018-02-13. Avoid downturn vulnerability by managing correlation dependency. Asymmetric Dependence in Finance examines the risks and benefits of asset correlation and provides effective strategies for more profitable portfolio management. Beginning with a thorough explanation of the extent and nature of asymmetric dependence in the financial markets, this book delves into the practical measures fund managers and investors can implement to boost fund performance. From managing asymmetric dependence using Copulas to mitigating asymmetric dependence risk in real estate, credit and CTA markets, the discussion presents a coherent survey of the state of the art tools available for measuring and managing this difficult but critical issue. Many funds suffered significant losses during recent

downturns despite having a seemingly well diversified portfolio Empirical evidence shows that the relation between assets is much richer than previously thought and correlation between returns is dependent on the state of the market this book explains this asymmetric dependence and provides authoritative guidance on mitigating the risks Examine an options based approach to limiting your portfolio s downside risk Manage asymmetric dependence in larger portfolios and alternate asset classes Get up to speed on alternative portfolio performance management methods Improve fund performance by applying appropriate models and quantitative techniques Correlations between assets increase markedly during market downturns leading to diversification failure at the very moment it is needed most The 2008 Global Financial Crisis and the 2006 hedge fund crisis provide vivid examples and many investors still bear the scars of heavy losses from their well managed well diversified portfolios Asymmetric Dependence in Finance shows you what went wrong and how it can be corrected and managed before the next big threat using the latest methods and models from leading research in quantitative finance
