

Z33 ECM HARNESS CONNECTOR

This is how to wire the GReddy E-Manage ignition harness to your 350z. I am not responsible for any damage you may cause to your Z while attempting to do this. I have only been testing this setup for two weeks. So far I have had no problems. But that is not much testing time. Solder all connections well, be careful not to cold solder any points because they may break over time. If one does your going to have a rough running motor because one of your cylinders will not be firing. The e-manage ignition harness has 12 wires, 6 different colors. Each color has a black or white stripe. Lets say we use the black as an input, and white as the output. Solder one 1N5400 Rectifier Diode (available at radio shack) on each white wire (output to the coils) with the band marking on the diode facing the wire that goes to the coil, or opposite the e-manage side of the wire. Refer to the schematic for an illustration. If your using the GReddy RPM adapter its yellow wires should be attached to the wires from the ECU, before the e-manage. Basically you're just wiring the ignition harness up the way the GReddy says to and adding in a rectifier diode inline with each output. This will keep any excess current from reaching the coils between each fire to keep them from overheating and burning out.

The e-manage does not expect a certain channel to be a specific cylinder on the motor. So whatever color you use for each cylinder is fine, just make sure not to mix up the input and the outputs (black and white stripes). The instructions that come with the ignition harness explain how to plug in the wires to the plug that plugs into the main e-manage unit.

To test your ignition harness installation go to the ignition timing map, find the cell that is highlighted in the map. This will be the value that the e-manage is currently adjusting the timing. Set it to -3 or so with the motor idling. This should result in a lower rpm and the motor running a little rough. No worry... just set it back to zero. This tells you the e-manage is in fact pulling the timing advance. You cannot advance the timing with this setup. The e-manage does not know when to fire to advance timing; it simply delays the ignition signal to reduce the timing advance.
