The Unified Learning Model Duane F. Shell,David W. Brooks,Guy Trainin,Kathleen M. Wilson,Douglas F. Kauffman,Lynne M. Herr,2009-12-01 This is a book about how humans learn Our focus is on classroom learning although the principles are as the name of this book indicates universal We are concerned with learning from pre school to post graduate We are concerned with most business industrial and military training We do not address how infants learn how to speak or walk or how grown ups improve their tennis swing We do address all learning described by the word thought as well as anything we might try to teach or instruct in formal educational settings In education the words theory and model imply conjecture In science these same words imply something that is a testable explanation of phenomena able to predict outcomes of experiments This book presents a model of learning that the authors offer in the sense of scientists rather than educators Conjecture implies that information is incomplete and so it surely is with human learning On the other hand we assert that more than enough is known to sustain a scientific model of learning This book is not a review of the literature Instead it is a synthesis Scholars and many teachers likely have heard much if not most or even all of the information we use to develop the unified learning model What you have not read before is a model putting the information together in just this way this is the first one
