**Quality of Instruction in Physics** Hans E. Fischer, Peter Labudde, Knut Neumann, Jouni Viiri, 2014 This book reports the findings from the tri national video study Quality of Instruction in Physics QuIP Within the scope of the QuIP study physics instruction was investigated in a total of 103 classes from Finland North Rhine Westphalia Germany and German speaking Switzerland The main aim was to identify typical patterns of physics instruction of the three samples and to investigate conditions under

which these patterns are successful with respect to students learning interest and motivation Among others instructional characteristics the quality of students practical work successful patterns of sequencing the subject matter structure and teaching strategies were investigated by means of analyses of video recorded lessons Variables external to instruction that were investigated included teachers professional knowledge and students cognitive abilities The study followed a pre post design with data collection prior to and after an instructional unit on electrical energy and power The results are well in line with the findings from large scale international studies indicating a particularly successful instructional pattern in Finland A comparison of characterisation of instruction in comparison between the three countries reveals important findings for the improvement of the teaching and learning of physics in secondary school education *Data Analysis and Applications 1* Christos H. Gessner,T.G. Blenkinsop,P. Sorjonen-Ward,2018-08-07 Economically viable concentrations of mineral resources are uncommon in Earth s crust Most ore deposits that were mined in the past or are currently being extracted were found at or near Earth s surface often serendipitously To meet the future

demand for mineral resources exploration success hinges on identifying targets at depth Achieving this requires accurate and informed models of the Earth's crust that are consistent with all available geological geochemical and geophysical information paired with an understanding of how ore forming systems relate to Earth's evolving structure Contributions to this volume address the future resources challenge by i applying advanced microscale geochemical detection and characterization methods ii introducing more rigorous 3D Earth models iii exploring critical behaviour and coupled processes iv evaluating the role of geodynamic and tectonic setting and v applying 3D structural models to characterize specific ore forming systems
