F. Meyer,Michael T. Flanagan,2016-07-09 Threshold Concepts in Practice brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice and the learning experiences of their students through the lens of the Threshold Concepts Framework In any discipline there are certain concepts the jewels in the curriculum whose acquisition is akin to passing through a portal Learners enter new conceptual and often affective territory Previously inaccessible ways of thinking or practising come into view without which they cannot progress and which offer a transformed internal view of subject landscape or even world view These conceptual gateways are integrative exposing the previously hidden interrelatedness of ideas and are irreversible However they frequently present troublesome knowledge and are often points at which students become stuck Difficulty in understanding may leave the learner in a liminal state of transition a betwixt and between space of knowing and not knowing where understanding can approximate to a form of mimicry Learners navigating such spaces report a sense of uncertainty ambiguity paradox anxiety even chaos The liminal space may equally be one of awe and wonderment Thresholds research identifies these spaces as key transformational points

crucial to the learner's development but where they can oscillate and remain for considerable periods. These spaces require not only conceptual but ontological and discursive shifts. This volume, the fourth in a tetralogy on Threshold Concepts, discusses student experiences and the curriculum interventions of their teachers in a range of disciplines and professional practices including medicine, law, engineering, architecture, and military education. Content Guidance provides an examiner's overview of the module's key terms and concepts and identifies opportunities to exhibit the skills required by the unit. It is designed to help students to structure their revision and make them aware of the concepts they need to understand the exam and how they might analyse and evaluate topics. High school days in Africa were ones of challenge, hard work, and fun. I attended a total of four high schools, commencing Form 1 at Vainona High School, Forms 3 at Benoni and Churchill High Schools, and sixth form college at ILSA. During my time, I faced many struggles and adjustments, but throughout my high school era, I never failed a public exam: ZJC, OAS, and A Levels, and Maths Olympiad. I also took a keen interest in sport and clubs. In particular, I represented my schools in innumerable chess tournaments. There were also the times of flirting and romance. Punishments included the cane, manual labour, and detention. Suspension and expulsions were only for very serious offences. I hope that this book brings back high school memories to each reader. Cases on Research-Based Teaching Methods in Science Education de Silva, Eugene, 2014-08-31. While the great scientists of the past recognized a need for a multidisciplinary approach, today's schools often treat math and science as subjects separate from the rest. This not only creates a disinterest among students but also a potential learning gap once students reach college and then graduate into the workforce. *Cases on Research Based Teaching*
