

Step 1: Define the probability, p
Let p be the proportion of people who purchase Jacques' brand of bread.

Step 2: Write the hypotheses

$$H_0: p = 0.8$$

$$H_1: p > 0.8$$

Step 3: Define the test statistic
For $X \sim B(100, p)$

Step 4: Calculate the p -value
Assuming H_0 is true, then $P(X \geq 86) = 0.08044$

Step 5: Compare the p -value with the given significance level
 $0.08044... < 10\%$

Step 6: Decide whether there is enough evidence to reject H_0
The p -value is less than the significance level so there is enough evidence to reject H_0

Step 7: Write a conclusion in context
There is sufficient evidence to reject the null hypothesis at the 10% level of significance.

The test supports Jacques' claim that more than 80% of people who shop in the supermarket buy his brand of bread.
