There are some factors to observe when feeding wildlife during the winter season. When the winter has really arrived, the feeding of resident and migrant birds should become not a casual activity but a regular and important one as these (36) (diets) become dependent on your supply of winter food. It is (37) (good) never to feed birds at all than to put out food for a period and then forget about them and they will surely die of starvation if food they have come to expect is (38) (less) of them.

Increase the quantities of fatty food - this gives strength, stamina and warmth. Make up a special bird 'pudding' by mixing together seeds, nuts, pieces of cheese, soft biscuits, stale cake, (39) (boil) potatoes and other scraps and place in a large cup or similar receptacle. Pour hot fat over the (40) (mix) and allow to cool and set before turning this out on to the bird table.

Water is as important as food. This should be in a receptacle shallow enough to let birds drink and (41) (bathe) in it, probably not more than four inches deep and made of something with a rough surface. The birds will not be able to support (42) (they) in a container made of a smooth substance, such as plastic. The water should be changed quite (43) (frequent) and should never be allowed to freeze solid in really freezing weather conditions.

The importance of water in winter is that it helps the birds to maintain healthy, well-oiled and warm coats. With its beak, the bird smoothes its feathers into position and dips its beak (44) (repeat) into its oil gland and spreads the waterproof substance smoothly along its feather. This complex preening process is vital to the warmth and protection of the bird.

Birds become very engrossed when bathing, so make sure that the bird bath is in a position near cover, to which the birds can dart if surprised by a cat, dog or squirrel which may be (45) (stalk) on them. If you really care to take all these precautions, the birds may be allowed to feed well and take bath in safety.
