The History of Mathematics: A Source-Based Approach June Barrow-Green, Jeremy Gray, Robin Wilson, 2021-12-17 The History of Mathematics A Source Based Approach is a comprehensive history of the development of mathematics This the first volume of the two volume set takes readers from the beginning of counting in prehistory to 1600 and the threshold of the discovery of calculus It is notable for the extensive engagement with original primary and secondary source material The coverage is worldwide and embraces developments including education in Egypt Mesopotamia Greece China India the Islamic world and Europe The emphasis on astronomy and its historical relationship to mathematics is new and the presentation of every topic is informed by the most recent scholarship in the field The two volume set was designed as a textbook for the authors acclaimed year long course at the Open University It is in addition to being an innovative and insightful textbook an invaluable resource for students and scholars of the history of mathematics The authors each among the most distinguished mathematical historians in the world have produced over fifty books and earned scholarly and expository prizes from the major mathematical societies of the English speaking world

Using History to Teach Mathematics Victor J. Katz, 2000-09-21 This volume examines how the history of mathematics can find application in the teaching of mathematics itself

Beginning Algebra Dennis T. Christy, Robert Rosenfeld, 1994 This book takes a concrete approach as opposed to a conceptual approach to beginning algebra Much emphasis is placed on problem solving including relevant applications and extensive learning aids help the students

The Mathematics of Egypt, Mesopotamia, China, India, and Islam Victor J. Katz, Annette Imhausen, 2007-08-05 In recent decades it has become obvious that mathematics has always been a worldwide activity But this is the first book to provide a substantial collection of English translations of key mathematical texts from the five most important ancient and medieval non Western mathematical cultures and to put them into full historical and mathematical context The Mathematics of Egypt Mesopotamia China India and Islam gives English

readers a firsthand understanding and appreciation of these cultures important contributions to world mathematics The five section authors Annette Imhausen Egypt Eleanor Robson Mesopotamia Joseph Dauben China Kim Plofker India and J Lennart Berggren Islam are experts in their fields Each author has selected key texts and in many cases provided new translations The authors have also written substantial section introductions that give an overview of each mathematical culture and explanatory notes that put each selection into context This authoritative commentary allows readers to understand the sometimes unfamiliar mathematics of these civilizations and the purpose and significance of each text Addressing a critical gap in the mathematics literature in English this book is an essential resource for anyone with at least an undergraduate degree in mathematics who wants to learn about non Western mathematical developments and how they helped shape and enrich world mathematics The book is also an indispensable guide for mathematics teachers who want to use non Western mathematical ideas in the classroom

Intermediate Algebra Dennis T. Christy, 1994 This book takes a concrete approach to mathematics as opposed to a conceptual approach What separates this text from the competition is how much emphasis is placed on problem solving including relevant applications and the extensive learning aids incorporated to help the students

Mathematical Reviews and their role in creating a publishing infrastructure for a global mathematical literature The use of Latin squares for agricultural crop experiments at the Rothamsted Experimental Station The many contributions of women to the advancement of computing techniques at the Cavendish Laboratory at the University of Cambridge in the 1960s The volume concludes with two short plays one set in Ancient Mesopotamia and the other in Ancient Egypt that are well suited for use in the mathematics classroom Written by leading scholars in the field these papers are accessible not only to mathematicians and students of the history and philosophy of mathematics but also to anyone with a general interest in mathematics American Book Publishing Record ,2001 **HPC@Green IT** Ralf Gruber,Vincent Keller,2010-03-15

Making the most efficient use of computer systems has rapidly become a leading topic of interest for the computer industry and its customers alike However the focus of these discussions is often on single isolated and specific architectural and technological improvements for power reduction and conservation while ignoring the fact that power efficiency as a ratio of performance to power consumption is equally influenced by performance improvements and architectural power reduction Furthermore efficiency can be influenced on all levels of today's system hierarchies from single cores all the way to distributed Grid environments To improve execution and power efficiency requires progress in such diverse fields as program optimization optimization of program scheduling and power reduction of idling system components for all levels of the system hierarchy Improving computer system efficiency requires improving system performance and reducing system power consumption To research and reach reasonable conclusions about system performance we need to not only understand the architectures of our computer systems and the available array of code transformations for performance optimizations but we also need to be able to express this understanding in performance models good enough to guide decisions about code optimizations for specific systems This understanding is necessary on all levels of the system hierarchy from single cores to nodes to full high performance computing HPC systems and eventually to Grid environments with multiple systems and resources *The Publishers' Trade List Annual* ,1988 Bookbuyers' Reference Book ,1972 **Changing Perspectives Resource Manual** ,1997 **Resources in Education** ,1997 **Taming the Unknown** Victor J. Katz,Karen Hunger Parshall,2020-04-07 What

is algebra For some it is an abstract language of x 's and y 's For mathematics majors and professional mathematicians it is a world of axiomatically defined constructs like groups rings and fields Taming the Unknown considers how these two seemingly different types of algebra evolved and how they relate Victor Katz and Karen Parshall explore the history of algebra from its roots in the ancient civilizations of Egypt Mesopotamia Greece China and India through its development in the medieval Islamic world and medieval and early modern Europe to its modern form in the early twentieth century Defining algebra originally as a collection of techniques for determining unknowns the authors trace the development of these techniques from geometric beginnings in ancient Egypt and Mesopotamia and classical Greece They show how similar problems were tackled in Alexandrian Greece in China and in India then look at how medieval Islamic scholars shifted to an

algorithmic stage which was further developed by medieval and early modern European mathematicians With the introduction of a flexible and operative symbolism in the sixteenth and seventeenth centuries algebra entered into a dynamic period characterized by the analytic geometry that could evaluate curves represented by equations in two variables thereby solving problems in the physics of motion This new symbolism freed mathematicians to study equations of degrees higher than two and three ultimately leading to the present abstract era Taming the Unknown follows algebra s remarkable growth through different epochs around the globe Books Out-of-print ,1980
