These distributions were obtained through the following system procedure:

1. Since many parts in the unit have special safety-related characteristics, always use genuine Hitachi's replacement parts. Especially critical parts in the power circuit block should not be replaced with other makes. Critical parts are marked with  in the schematic diagram and circuit board diagram.
2. Before returning a repaired unit to the customer, the service technician must thoroughly test the unit to ascertain that it is operating safely and properly without danger of electrical shock.

Abstract—The purpose of this study was to determine the effect of a 10-week, 1000 kcal energy deficit diet on the body composition and physical performance of sedentary, obese women. The study was a randomized, controlled trial. The subjects were randomly assigned to either a control group or an experimental group. The control group was instructed to maintain their current diet and lifestyle, while the experimental group was instructed to follow a 1000 kcal energy deficit diet. The study was conducted over a 10-week period. The primary outcome measures were body composition (body mass index, body fat percentage, and lean body mass) and physical performance (maximal aerobic power, maximal anaerobic power, and maximal anaerobic endurance). The results showed that the experimental group had a significant decrease in body mass index, body fat percentage, and lean body mass compared to the control group. Additionally, the experimental group had a significant increase in maximal aerobic power, maximal anaerobic power, and maximal anaerobic endurance compared to the control group. These findings suggest that a 10-week, 1000 kcal energy deficit diet can improve body composition and physical performance in sedentary, obese women.

Abstract *Staphylococcus aureus* is a leading cause of nosocomial infection. The purpose of this study was to determine the prevalence of *S. aureus* in the hospital environment and to identify risk factors for colonization. A total of 100 samples were collected from various hospital environments. The results showed that 60% of the samples were positive for *S. aureus*. The highest prevalence was found in the intensive care unit (ICU) and the operating room. Risk factors for colonization included contact with the ICU, the operating room, and the use of antibiotics.
