A Transition to Advanced Mathematics William Johnston, Alex McAllister, 2009-07-27 A Transition to Advanced Mathematics A Survey Course promotes the goals of a bridge course in mathematics helping to lead students from courses in the calculus sequence and other courses where they solve problems that involve mathematical calculations to theoretical upper level mathematics courses where they will have to prove theorems and grapple with mathematical abstractions The text simultaneously promotes the goals of a survey course describing the intriguing questions and insights fundamental to many diverse areas of mathematics including Logic Abstract Algebra Number Theory Real Analysis Statistics Graph Theory and Complex Analysis The main objective is to bring about a deep change in the mathematical character of students how they think and their fundamental perspectives on the world of mathematics This text promotes three major mathematical traits in a meaningful transformative way to develop an ability to communicate with precise language to use mathematically sound reasoning and to ask probing questions about mathematics In short we hope that working through A Transition to Advanced Mathematics encourages students to become mathematicians in the fullest sense of the word A Transition to Advanced Mathematics has a number of distinctive features that enable this transformational experience Embedded Questions and Reading Questions illustrate and explain fundamental concepts allowing students to test their understanding of ideas independent of the exercise sets The text has extensive diverse Exercises Sets with an average of 70 exercises at the end of section as well as almost 3 000 distinct exercises In addition every chapter includes a section that explores an application of the theoretical ideas being studied We have also interwoven embedded reflections on the history culture and philosophy of mathematics throughout the text Statistical

STATISTICAL INFERENCE : THEORY OF ESTIMATION MANOJ

KUMAR SRIVASTAVA, ABDUL HAMID KHAN, NAMITA SRIVASTAVA, 2014-04-03 This book is sequel to a book Statistical Inference Testing of Hypotheses published by PHI Learning Intended for the postgraduate students of statistics it introduces the problem of estimation in the light of foundations laid down by Sir R A Fisher 1922 and follows both classical and Bayesian approaches to solve these problems The book starts with discussing the growing levels of data summarization to reach maximal summarization and connects it with sufficient and minimal sufficient statistics The book gives a complete account of

theorems and results on uniformly minimum variance unbiased estimators UMVUE including famous Rao and Blackwell theorem to suggest an improved estimator based on a sufficient statistic and Lehmann Scheffe theorem to give an UMVUE It discusses Cramer Rao and Bhattacharyya variance lower bounds for regular models by introducing Fishers information and Chapman Robbins and Kiefer variance lower bounds for Pitman models Besides the book introduces different methods of estimation including famous method of maximum likelihood and discusses large sample properties such as consistency consistent asymptotic normality CAN and best asymptotic normality BAN of different estimators Separate chapters are devoted for finding Pitman estimator among equivariant estimators for location and scale models by exploiting symmetry structure present in the model and Bayes Empirical Bayes Hierarchical Bayes estimators in different statistical models Systematic exposition of the theory and results in different statistical situations and models is one of the several attractions of the presentation Each chapter is concluded with several solved examples in a number of statistical models augmented with exposition of theorems and results KEY FEATURES Provides clarifications for a number of steps in the proof of theorems and related results Includes numerous solved examples to improve analytical insight on the subject by illustrating the application of theorems and results Incorporates Chapter end exercises to review student s comprehension of the subject Discusses detailed theory on data summarization unbiased estimation with large sample properties Bayes and Minimax estimation separately in different chapters

Actuarial Mathematics for Life Contingent Risks David C. M. Dickson, Mary R. Hardy, Howard R. Waters, 2009-09-24 How can actuaries best equip themselves for the products and risk structures of the future Using the powerful framework of multiple state models three leaders in actuarial science give a modern perspective on life contingencies and develop and demonstrate a theory that can be adapted to changing products and technologies The book begins traditionally covering actuarial models and theory and emphasizing practical applications using computational techniques The authors then develop a more contemporary outlook introducing multiple state models emerging cash flows and embedded options Using spreadsheet style software the book presents large scale realistic examples Over 150 exercises and solutions teach skills in simulation and projection through computational practice Balancing rigour with intuition and emphasising applications this text is ideal for university courses but also for individuals preparing for professional actuarial exams and qualified actuaries wishing to freshen up their skills

Statistical Theory and Inference David J. Olive, 2014-05-07 This text is for a one semester graduate course in statistical theory and covers minimal and complete sufficient statistics maximum likelihood estimators method of moments bias and mean square error uniform minimum variance estimators and the Cramer Rao lower bound an introduction to large sample

theory likelihood ratio tests and uniformly most powerful tests and the Neyman Pearson Lemma A major goal of this text is to make these topics much more accessible to students by using the theory of exponential families Exponential families indicator functions and the support of the distribution are used throughout the text to simplify the theory More than 50 brand name distributions are used to illustrate the theory with many examples of exponential families maximum likelihood estimators and uniformly minimum variance unbiased estimators There are many homework problems with over 30 pages of solutions
