CHECKOUT

After the Q624A installation and wiring has been completed, make the following checks to ensure that the system is working properly.

Ignition Spark Response Test

The flame relay should not respond (pull in) to ignition spark. To determine flame detector's sensitivity to ignition spark, perform the following steps:

1. Shut off the fuel supply to both pilot and main fuel valves manually.
2. Start system by raising the controller set point or by pressing the Start button.
3. Energize the Q624A Solid State Spark Generator so ignition spark is produced between electrode and ground.
4. Check to be sure that ignition has not occurred (there should be no flame). Repeat steps 1 through 3 above until there is no flame.
5. Check the flame relay on the flame safeguard control. If the relay has not pulled in, the system is operating properly. Continue check out with the pilot turndown test.
6. If the flame relay pulls in, stop the system, replace the Q624A, and repeat steps 2 through 5.
7. If the flame relay pulls in after replacing the Q624A, stop the system, replace the flame safeguard control, and repeat steps 2 through 5.
8. If the flame relay pulls in after replacing the flame safeguard control, contact the local Honeywell branch office.

Pilot Turndown Test

Refer to the flame safeguard control instructions for the exact procedure to be used in performing the pilot turndown test.

Final Checkout

After other checks have been completed, restore the system to normal operation and observe at least one complete cycle of operation to be sure of satisfactory burner operation.
