## **Hospital Management System**

### **Introduction:**

This is a Software Requirements Specification (SRS) for the Hospital Management System. It describes the functions, goals and tasks that the system can perform. This is used to describe the scope of the project and to plan for the system's design and implementation.

The following features are the high-level requirements that this system satisfies:

- Work Scheduling and doctors to - Assigning nurses to doctors patients
- Admissions - Admitting patients, assigning the patients to appropriate wards
- Patient Care - Monitoring patients while they are in the hospital
- Surgery Management - Planning and organizing the work that surgeons and nurses perform in the operating rooms
- Ward Management - Planning and coordinating the management of wards and rooms
- Waiting list - Monitoring to see if there are any patients waiting for available beds, assigning them to doctors and beds once these become available

The Requirements are classified into two categories:

- Functional requirements
- Non-functional requirements.

Proceedings of the 2nd International Conference on the Frontiers of Robotics and Software Engineering (FRSE 2024)

Jiangping Hu, Jin Zhang, 2025-03-27 The proceeding of FRSE presents a collection of innovation research in the cutting edge fields of robotics and software engineering. It is highlighted within that there are novel methodologies, critical analyses and breakthrough results which emphasize the enhanced or amplified results achieved when robotics technologies are integrated with advanced software. This book is outfitted with numerous diagrams, tables and conceptual frameworks structured to enhance comprehension and accessibility that facilitate a deeper understanding of complex topics. The presentation is not just theoretical but includes case studies and real world applications offering a practical approach to complex problem solving techniques across related industries. Readers will receive benefits from this comprehensive resource, gain a renewed understanding of contemporary challenges and innovative solutions in robotics and software engineering. And this book will be a guide and asset for research scholars and professionals in robotics and software engineering looking to apply these cutting edge technologies in impactful ways.

**Requirements Engineering for Software and Systems, Second Edition** Phillip A. Laplante, 2013-10-17 As requirements engineering continues to be recognized as the key to on time and on budget delivery of software and systems projects, many engineering programs have made requirements engineering mandatory in their curriculum. In addition, the wealth of new software tools that have recently emerged is empowering practicing engineers to improve their requirements engineering habits. However, these tools are not easy to use without appropriate training. Filling this need, *Requirements Engineering for Software and Systems, Second Edition* has been vastly updated and expanded to include about 30 percent new material. In addition to new exercises and updated references in every chapter, this edition updates all chapters with the latest applied research and industry practices. It also presents new material derived from the experiences of professors who have used the text in their classrooms. Improvements to this edition include: An expanded introductory chapter with extensive discussions on requirements analysis, agreement and consolidation. An expanded chapter on requirements engineering for Agile methodologies. An expanded chapter on formal methods with new examples. An expanded section on requirements traceability. An updated and expanded section on requirements engineering tools. New exercises including ones suitable for research projects. Following in the footsteps of its bestselling predecessor, the text illustrates key ideas associated with requirements engineering using extensive case studies and three common example systems: an airline baggage handling system, a point of sale system for a large pet store chain, and a system for a smart home. This edition also includes an example of a wet well pumping system for a wastewater treatment station. With a focus on software intensive systems but highly applicable to non software systems, this text provides a probing and comprehensive review of recent developments in requirements engineering in high integrity systems.
