Battery Management Systems H.J. Bergveld, W.S. Kruijt, P.H.L. Notten, 2013-03-09 Battery Management Systems Design by Modelling describes the design of Battery Management Systems BMS with the aid of simulation methods The basic

tasks of BMS are to ensure optimum use of the energy stored in the battery pack that powers a portable device and to prevent damage inflicted on the battery pack. This becomes increasingly important due to the larger power consumption associated with added features to portable devices on the one hand and the demand for longer run times on the other hand. In addition to explaining the general principles of BMS tasks such as charging algorithms and State of Charge (SoC) indication methods, the book also covers real life examples of BMS functionality of practical portable devices such as shavers and cellular phones. Simulations offer the advantage over measurements that less time is needed to gain knowledge of a battery's behaviour in interaction with other parts in a portable device under a wide variety of conditions. This knowledge can be used to improve the design of a BMS even before a prototype of the portable device has been built. The battery is the central part of a BMS and good simulation models that can be used to improve the BMS design were previously unavailable. Therefore a large part of the book is devoted to the construction of simulation models for rechargeable batteries. With the aid of several illustrations it is shown that design improvements can indeed be realized with the presented battery models. Examples include an improved charging algorithm that was elaborated in simulations and verified in practice and a new SoC indication system that was developed showing promising results. The contents of *Battery Management Systems Design by Modelling* is based on years of research performed at the Philips Research Laboratories. The combination of basic and detailed descriptions of battery behaviour both in chemical and electrical terms makes this book truly multidisciplinary. It can therefore be read both by people with an electro-chemical and an electrical engineering background.

Micromodels-Volume 1 Markus Christl, Thorsten Feuchter, Harry Jacobsen, Andreas Rackel, Dirk Stukenbrok, On the road and off road on and under water and even in the air micro models can do everything like the big ones. Since miniaturised electronic components, tiny motors and the smallest batteries have been available it is possible to build remote controlled models even in H0 scale. They can drive, fly or swim, can be steered, have indicators, headlights and blue lights, compete in four wheel drive truck trials or dive in the aquarium. The authors, all pioneers of this new fascinating hobby, show here how to get from the simple conversion of a commercially available model to the realisation of a wide range of special functions to the high school of micromodelling. There are detailed building descriptions richly illustrated with more than 200 illustrations for a truck with refinements, a bulldozer with crawler tracks, a Unimog for road and rail, a landing ship, a research submarine, a twin engine aircraft and several more. In addition there are explanations of the basic electrical and electronic components as well as sources of supply and useful tips and tricks for the workshop because micromodelling requires special knowledge and skills. Discover a new challenge for talented tinkerers: micromodelling. *Proceedings for the Second Workshop on Smart Power/Power Integrated Circuits: Technology and Applications*, 1994. *Absolute Beginner's Guide to A+ Certification* Mark Edward Soper, 2004.
