Information and communication technologies for small-scale fisheries (ICT4SSF) - A handbook for fisheries stakeholders Tilley, A. and Roscher, M. (Ed.), The aim of this report is to present evidence towards how Information and Communication Technologies for Small scale Fisheries ICT4SSF might enable and support the implementation of the FAO s Voluntary Guidelines for Securing Sustainable Small Scale Fisheries in the Context of Food Security and Poverty Eradication SSF Guidelines We present case studies of ICT4SSF initiatives in different use areas to identify key themes and reflect on successes and failures There are very few baselines against which to compare fisher wellbeing and access before and after ICT initiatives and this gap is an important finding in this report Thus far success has only been assessed qualitatively and relatively in terms of uptake sustainability and local legitimacy Still some ICT4SSF initiatives presented in this document are closely aligned with the Principles for Digital Development and the objectives of the SSF Guidelines These initiatives highlighted that when ICTs are locally led or developed or co designed with end users and marginalised groups or strengthened already existing networks and technologies the potential for positive impact is much higher However there is much less evidence of proactive confrontation of inequality through data ownership Further there are very few examples of developing mechanisms for fishers and fish workers to hold access or own their data or legal mechanisms to recognise their ownership or protect them against misuse or manipulation
