Mathematics Education Lyn D. English, Graeme S. Halford, 1995 First Published in 1995 Routledge is an imprint of Taylor Francis an informa company *Mathematics Education and the Legacy of Zoltan Paul Dienes* Bharath Sriraman, 2008-03-01 The name of Zoltan P Dienes 1916 stands with those of Jean Piaget and Jerome Bruner as a legendary figure whose theories of learning have left a lasting impression on the field of mathematics education Dienes name is synonymous with the Multi base blocks also known as Dienes blocks which he invented for the teaching of place value He also is the inventor of Algebraic materials and logic blocks which sowed the seeds of contemporary uses of manipulative materials in mathematics instruction Dienes place is unique in the field of mathematics education because of his theories on how mathematical structures can be taught from the early grades onwards using multiple embodiments through manipulatives games stories and dance Dienes notion of embodied knowledge presaged other cognitive scientists who eventually came to recognize the importance of embodied knowledge and situated cognition where knowledge and abilities are organized around experience as much as they are organized around abstractions Dienes was an early pioneer in what was later to be called sociocultural perspectives and democratization of learning This monograph compiled and edited by Bharath Sriraman honors the seminal contributions of Dienes to mathematics education and includes several recent unpublished articles written by Dienes himself These articles exemplify his principles of guided discovery learning and reveal the non trivial mathematical structures that can be made accessible to any student The monograph also includes a rare interview with Dienes in which he reflects on his life his work the role of context language and technology in mathematics teaching and learning today The book finds an important place in any mathematics education library and is vital reading for mathematics education researchers cognitive scientists prospective teachers graduate students and teachers of mathematics *Handbook of Digital Resources in Mathematics Education* Birgit Pepin, Ghislaine Gueudet, Jeffrey Choppin, 2024-06-21 This handbook presents the state of the art scholarship on theoretical frames mathematical content learning environments pedagogic practices teacher professional learning and policy issues related to the development and use of digital resources in mathematics education With the advent of more and more open access digital resources teachers choose from the web what they see fit for their classroom students choose in the moment what they need for their projects and learning paths However educators and students often find it difficult to choose from the abundance of materials on offer as they are uncertain about their quality and beneficial use It is clear that at a time of bouleversement of the teaching learning processes it is crucial to understand the quality and the potentially transformative aspects of digital resources This book provides comprehensive analyses of and insights into the transformative aspects of digital resources Fourth International Handbook of Mathematics Education M.A. (Ken) Clements, Berinderjeet Kaur, Thomas Lowrie, Vilma Mesa, Johan Prytz, 2024-11-19 This fourth international handbook discusses developments not recognized or dealt with fully in the first three Springer Mathematics Education handbooks and tackles

controversial issues in the field After starting with a provocative introductory chapter which asks whether controversy is a healthy feature of international mathematics education the four following sections cover a mathematics education in Asia b the roles of theory in research and practice c equity and social justice and d curriculum and change These themes are taken up in 28 chapters by 60 authoritative authors from all continents Each of the four sections is structured on the basis of past present and future aspects Like the first three mathematics education handbooks this handbook provides a very valuable resource for teachers mathematics education practitioners and researchers education policy makers and mathematicians as well as graduate and undergraduate students

Handbook of International Research in Mathematics Education Lyn D. English, 2002-03 This state of the art Handbook brings together important mathematics education research that makes a difference in both theory and practice research that anticipates problems and needed knowledge before they become impediments to progress interprets future oriented problems into researchable issues presents the implications of research and theory development in forms that are useful to practitioners and policymakers and facilitates the development of research communities to focus on neglected priorities or strategic opportunities The volume represents a genuine attempt by contributors from around the world to advance the discipline rather than simply review what has been done and what exists The Handbook was developed in response to a number of major global catalysts for change including the impact of national and international mathematics comparative assessment studies the social cultural economic and political influences on mathematics education and research the influence of progressively sophisticated and available technology and the increasing globalization of mathematics education and research From these catalysts have emerged specific priority themes and issues for mathematics education research in the 21st century Three key themes were identified for attention in this volume life long democratic access to powerful mathematical ideas advances in research methodologies and influences of advanced technologies Each of these themes is examined in terms of learners teachers and learning contexts with theory development as an important component of all these aspects Dynamic and forward looking the Handbook of International Research in Mathematics Education is distinguished by its focus on new and emerging theoretical models perspectives and research methodologies its uniformly high standard of scholarship and its emphasis on the international nature of mathematics education research It is an essential volume for all researchers professionals and students interested in mathematics education research in particular and more generally in international developments and future directions in the broad field of educational research

Democracy and Mathematics Education Kurt Stemhagen, Catherine Henney, 2021-05-06 In *Democracy and Mathematics Education* Kurt Stemhagen and Catherine Henney develop a way of thinking about the nature and purposes of math that is inclusive participatory and thoroughly human They use these ideas to create a school mathematics experience that can enhance students math abilities and democratic potential They locate mathematics origins in human activity and highlight the rich but often overlooked links between mathematical activity and democratic social

practices Democratic mathematics education foregrounds student inquiry and brings to light the moral dimensions of a discipline that has both remarkable utility and inevitable limitations For math educators the book s humanities approach helps to see the subject anew For philosophers it provides an important real world context for wrestling with perennial and timely questions engaging democratic and evolutionary theory to transform school math This alternative approach to mathematics and mathematics education provides a guide for how to use math to make democracy a larger part of school and wider social life 2021 Winner of the AESA Critics Choice Book Award Modeling Students' Mathematical Modeling Competencies Richard Lesh, Peter L. Galbraith, Christopher R. Haines, Andrew Hurford, 2013-03-17 Modeling Students Mathematical Modeling Competencies offers welcome clarity and focus to the international research and professional community in mathematics science and engineering education as well as those involved in the sciences of teaching and learning these subjects **Word Problems** Stephen K. Reed, 1998-12-01 Research by cognitive psychologists and mathematics educators has often been compartmentalized by departmental boundaries Word Problems integrates this research to show its relevance to the debate on the reform of mathematics education Beginning with the different knowledge structures that represent rule learning and conceptual learning the discussion proceeds to the application of these ideas to solving word problems This is followed by chapters on elementary multistep and algebra problems which examine similarities and differences in the cognitive skills required by students as the problems become more complex The next section on abstracting adapting and representing solutions illustrates different ways in which solutions can be transferred to related problems The last section focuses on topics emphasized in the NCTM Standards and concludes with a chapter that evaluates some of the programs on curriculum reform **Mathematical and Analogical Reasoning of Young Learners** Lyn D. English, 2004-07-19 Mathematical and Analogical Reasoning of Young Learners provides foundational knowledge of the nature development and assessment of mathematical and analogical reasoning in young children Reasoning is fundamental to understanding mathematics and is identified as one of the 10 key standards for school mathematics for the new millennium The book draws on longitudinal and cross cultural studies conducted in the United States and Australia of children s reasoning development as they progressed from preschool through the end of second grade The multifaceted analysis of young children s development of mathematical and analogical reasoning focuses on individual learners their learning environments and the interaction between the two The multidisciplinary team of authors present multiple perspectives and multiple methodologies and provide valuable information on organizing and sustaining interdisciplinary and cross cultural inquiry Key issues addressed include the relationship between mathematical and analogical reasoning how changes in children s reasoning relate to the implicit instruction they receive in their classrooms analyses of the participating teachers knowledge beliefs and practices with respect to mathematical and analogical reasoning of young learners and ways in which we might promote development of mathematical and analogical reasoning in young children This volume is highly

Galbraith, Hans-Wolfgang Henn, Mogens Niss, 2007-12-05 Among the themes that have been central to mathematics education during the last 30 years are those of mathematical modelling and applications of mathematics to extra mathematical fields More generally we refer to these as relations between mathematics and the extra mathematical world some times also called the real world or preferably according to Henry PoUak the rest of the world That applications and modelling have been important themes in mathematics education can be inferred from the wealth of literature on these topics including material generated from a multitude of national and international conferences In particular let us mention firstly the ICMEs the International Congresses on Mathematical Education with their regular working or topic groups and lectures on applications and modelling and secondly the series of ICTMAs the International Conferences on the Teaching of Mathematical Modelling and Applications which have been held biennially since 1983 Their Proceedings and Survey Lectures have addressed the state of the art at the relevant time and contain many examples studies conceptual contributions and resources involving relations between the real world and mathematics for all levels of the educational system In curricula and textbooks we find today many more references to real world phenomena and problems than say twenty years ago
