Connecting the Dots Between Inflammation and the Inner Workings of Programmed Cell Death Thomas Kaufmann,W. Wei-Lynn Wong,2020-05-21 Programmed cell death PCD is central in maintaining the life of multicellular organisms during development as well as in healthy adulthood or in the context of disease The best understood form of PCD is apoptosis a caspase mediated immunologically silent cell death that can be initiated in probably all cell types upon aging lack of growth support critical damage or infection One of the key pathways of apoptosis involves mitochondrial outer membrane permeabilization MOMP a process tightly regulated by members of the BCL 2 family Whereas PCD and apoptosis were used synonymously in the past other forms of PCD have been discovered more recently including RIPK1 3 and MLKL dependent necroptosis resulting in a necrotic phenotype and pyroptosis Interestingly key components of the necroptotic pathway are actively suppressed by apoptotic caspases and this interconnection allows a switch in cell death modalities with greatly impact on the host's immune response Recent findings link mitochondria and or MOMP to non apoptotic forms of PCD including ferroptosis and necroptosis putting this organelle even more in the center of cellular death This article collection highlights the exciting potential and as yet undiscovered regulation of programmed cell death that can impact the immune system and its response **Vaccination of Special Populations: Protecting the Vulnerable** Paolo Palma,Viviana Moschese,Federico Martinon-Torres,Daniel O'Connor,2023-08-30 Vaccines prevent 3 million of deaths every year and are a crucial to combat antimicrobial resistance An optimal implementation of existing vaccines could help to avert up to 15 million deaths as well as substantial disabilities Indeed vulnerable populations VPs including pregnant women newborns preterm infants elderly and patients affected by chronic diseases are frequently undervaccinated and or at risk of reduced vaccine efficacy presenting a major health and economic burden to society Vaccine development programs mainly focus on healthy populations therefore vaccination strategies are often based on data arising from healthy subjects **Modulation of the immune system by bacteria: from evasion to therapy** Marina De Bernard,Maria Kaparakis-Liaskos,Mario M.
