INFORMATION ON CYLINDER HEAD CONTACT SURFACE - AMBILAP-1000-45A

The cylinder head contact surface should only be machined if there is mechanical damage.

It should not be machined (by fine grinding) if the contact surface of the cylinder head is scored (wiped) in the longitudinal and transverse directions.

When the cylinder head is removed again, surface marking will be removed and when the cylinder head bolts are tightened.

Stack removal from the cylinder head and cylinder conditions of an engine should together be assessed. If the cylinder head contact surface is machined, the valve seats must be reset.
