Populations Byron K. Williams, James D. Nichols, Michael J. Conroy, 2002-05-16 Analysis and Management of Animal Populations deals with the processes involved in making informed decisions about the management of animal populations It covers the modeling of population responses to management actions the estimation of quantities needed in the modeling effort and the application of these estimates and models to the development of sound management decisions The book synthesizes and integrates in a single volume the methods associated with these themes as they apply to ecological assessment and conservation of animal populations Integrates population modeling parameter estimation and decision theoretic approaches to management in a single cohesive framework Provides authoritative state of the art descriptions of quantitative approaches to modeling estimation and decision making Emphasizes the role of mathematical modeling in the conduct of science and management Utilizes a unifying biological context consistent mathematical notation and numerous

biological examples **Integrating Conservation Biology and Paleobiology to Manage Biodiversity and Ecosystems in a Changing World** G. Lynn Wingard, Chris Schneider, Gregory P. Dietl, Damien Fordham, Policy makers and resource managers must make decisions that affect the resilience and sustainability of natural resources including biodiversity and ecosystem services However these decisions are often based on evidence or theory derived from highly altered systems and over short time periods of low magnitude environmental and climatic change Because natural systems change and evolve across multiple timescales from instantaneous to millennial long term understanding of how past life has responded to perturbations can inform resource managers By using these natural laboratories of the past conservation paleobiology and paleoecology provide the framework necessary to anticipate and plan for future changes The goal of this Research Topic is to heighten awareness among conservation and restoration practitioners to the value and applications of long term perspectives provided by conservation paleobiology and paleoecology Most conservation studies focus on systems already impacted by anthropogenic change these studies would benefit from paleontological data through expanded temporal scales identification of baselines and an understanding of how organisms have responded to past changes However resource management decisions rarely include input from paleontologists and paleoecological research is rarely incorporated into conservation decision making We seek to bridge this research implementation gap by highlighting the application of paleoecological data to issues such as biodiversity dynamics extinction risks and resilience to perturbations among other topics We hope to foster new cross disciplinary synergies by encouraging conservation scientists and managers to collaborate with paleontologists to improve conservation decision making and by increasing awareness among paleontologists to the needs of the resource management community This Research Topic will provide a forum for both the paleontological and resource management communities to exchange ideas that will enhance restoration and conservation decision making We invite papers on conceptual advances reviews of specific topics to guide efforts in research or practice case studies of successful applications articles describing datasets with applied value and perspective papers summarizing a body of paleontological research with relevance to the resource management community Topics can include but are not limited to Responses of species communities and ecosystems to perturbations Strategies to achieve the direct integration of paleobiology and paleoecology into on ground resource management Identifying baselines and reference conditions Increasing the robustness of forecasting models through the incorporation of paleontological data Identifying key species interactions and other phenomena as indicators of impending change New methodologies analytical tools and or proxies in the application of paleontological data to conservation and restoration practice Lynn Wingard Damien Fordham and Greg Dietl have no conflicts of interest Chris Schneider has a potential conflict of interest where manuscripts pertain to stakeholders in the petroleum industry as she is an independent contractor in the Alberta Oil Sands mining area **Modern aspects of sustainable management , Evolution in the Here and Now** Nigel Barber, 2020-05-12 This book argues that the two most influential theories on

modern human behavior cultural determinism and evolutionary psychology are quite inadequate Cultural deterministic theories deny personal experience and too often fall prey to anthropocentric bias Most evolutionary psychologists argue that humans are shaped to fit our ancestral past effectively freezing us in time Evolution in the Here and Now looks to new factors like social learning and adaptation to explain the idiosyncrasies of human behavior in a more complete and nuanced way Evolutionary psychologist Nigel Barber shows that human behavior is uniquely crafted by the surrounding environment in underappreciated and surprising ways For example commerce and agriculture can be interpreted as adaptive alternatives to hunting and gathering Irrigated farming was a response to land scarcity which ultimately permitted the rise of early cities This cross disciplinary approach unites the missing ingredients that have for so long impeded our understanding of our own species and its variation across cultures Evolution in the Here and Now is a bold step forward in the evolutionary understanding of human behavior that marries our biology with our history in ways that have never been attempted before

Petraglia,Bridget Allchin,2007-05-22 This is the first volume of its kind on prehistoric cultures of South Asia The book brings together archaeologists biological anthropologists geneticists and linguists in order to provide a comprehensive account of the history and evolution of human populations residing in the subcontinent New theories and methodologies presented provide new interpretations about the cultural history and evolution of populations in South Asia Culture History and Convergent Evolution Huw S. Groucutt,2020-07-23 This volume brings together diverse contributions from leading archaeologists and paleoanthropologists covering various spatial and temporal periods to distinguish convergent evolution from cultural transmission in order to see if we can discover ancient human populations With a focus on lithic technology the book analyzes ancient materials and cultures to systematically explore the theoretical and physical aspects of culture convergence and populations in human evolution and prehistory The book will be of interest to academics students and researchers in archaeology paleoanthropology genetics and paleontology The book begins by addressing early prehistory discussing the convergent evolution of behaviors and the diverse ecological conditions driving the success of different evolutionary paths Chapters discuss these topics and technology in the context of the Lower Paleolithic Earlier Stone age and Middle Paleolithic Middle Stone Age The book then moves towards a focus on the prehistory of our species over the last 40 000 years Topics covered include the human evolutionary and dispersal consequences of the Middle Upper Paleolithic Transition in Western Eurasia Readers will also learn about the cultural convergences and divergences that occurred during the Terminal Pleistocene and Holocene such as the budding of human

societies in the Americas The book concludes by integrating these various perspectives and theories and explores different methods of analysis to link technological developments and cultural convergence

Biobanking in the 21st Century

Feridoun Karimi-Busheri, 2015-09-29 Biobanking an emerging field supported by academia industry and health administrators alike is distinctly different today from the practice that once defined it The science of Biobanking which initially involved simply storing blood or tissue samples in a freezer is now a highly sophisticated field of research and expected to grow exponentially over the next decade or two This book aims to serve the purpose of further enriching the available literature on Biobanking by offering unique and more useful collection of ideas for the future The book outlines the experiences of developing modern Biobanking repositories in different countries whilst covering specific topics regarding the many aspects of Biobanking This book will be of interest to a wide range of readers including academics students volunteers and advocates of patients rights

Livestock Genomics and Community-based Breeding Strategies in

Low-and-Middle-Income Countries: Challenges, Opportunities and Future Perspectives Isidore Houaga, Maria Wurzinger, Ntanganedzeni Mapholi, 2024-07-17 Low and Middle Income Countries LMICs are home to diverse populations of livestock species adapted to various agro ecological zones production systems and harsh environmental conditions However the livestock in LMICs have not been systematically improved and current low levels of productivity do not meet the demand for livestock products by a growing population Recent advances in next generation sequencing and genotyping technologies have enabled the application of genomic selection in various livestock species in some western countries with great success Despite the low adoption of genomic breeding in LMICs livestock industry various studies and programs were initiated and some are still ongoing Furthermore community based breeding programs CBBP have been initiated in many LMICs with great benefits for smallholder livestock farmers CBBPs are based on the active participation of farmers from inception through to implementation and consider their needs views decisions breeding objectives and available infrastructure In Africa for instance small ruminants CBBPs have generated substantial genetic gains and socioeconomic benefits for rural poor farmers However the current challenges affecting the data recording and genetic evaluation of the CBBPs in LMICS are yet to be fully reported Furthermore the CBBPs are yet to integrate genomic selection in their breeding strategies For sustainable livestock breeding in LMICs there is a need to assess the current status of livestock genomics and community based breeding strategies to identify the challenges and suggest mitigating strategies and future improvement strategy plans In this Research Topic we aim to collect findings from past and current livestock genomics and community based breeding programs the challenges the lessons learned the opportunities and future perspectives
