

(c) Mass of 1 mole of anhydrous calcium chloride (CaCl_2) = $40 + 71 = 111 \text{ g}$

But 1 molecule of CaCl_2 contains 2 chloride ions₂₃
 $\therefore 111 \text{ g}$ of anhydrous CaCl_2 contains $2 \times 6.023 \times 10^{23}$
 $= 12 \times 10^{23}$ chloride ions

Q2) How many moles of NaOH are present in 160 g of it?

Soln: Mass of 1 mole of $\text{NaOH} = 23 + 16 + 1 = 40 \text{ g}$

40 g of NaOH contains 6×10^{23} no. of molecules

Moles in 160 g of $\text{NaOH} = \frac{160}{40} = \underline{4 \text{ moles}}$

Q3) What is the mass in grams of 2.5 moles of slaked lime Ca(OH)_2 .

Soln: Mass of 1 mole of slaked lime $\text{Ca(OH)}_2 = 40 + 32 + 2$
 $= 74 \text{ g}$

So mass of 2.5 moles of $\text{Ca(OH)}_2 = 2.5 \times 74 = \underline{185 \text{ g}}$

Means 2.5 moles of Ca(OH)_2 weigh 185 g .

Basic Principles of Calculations in Chemistry Ayorinde Awonusi,2010-10-13 Basic Principles of Calculations in Chemistry is written specifically to assist students in understanding chemical calculations in the simplest way possible Chemical and mathematical concepts are well simplified the use of simple language and stepwise explanatory approach to solving

quantitative problems are widely used in the book Senior secondary school high school and general pre college students will find the book very useful as a study companion to the courses in their curriculum College freshmen who want to understand chemical calculations from the basics will also find many of the chapters in this book helpful toward their courses Hundreds of solved examples as well as challenging end of chapter exercises are some of the great features of this book Students studying for SAT I II GCSE IGCSE UTME SSCE HSC and other similar examinations will benefit tremendously by studying all the chapters in this book conscientiously *Multiple Solution Methods for Teaching Science in the Classroom* Stephen DeMeo, 2008 For the first time in science education the subject of multiple solution methods is explored in book form While a multiple method teaching approach is utilized extensively in math education there are very few journal articles and no texts written on this topic in science Teaching multiple methods to science students in order to solve quantitative word problems is important for two reasons First it challenges the practice by teachers that one specific method should be used when solving problems Secondly it calls into question the belief that multiple methods would confuse students and retard their learning Using a case study approach and informed by research conducted by the author this book claims that providing students with a choice of methods as well as requiring additional methods as a way to validate results can be beneficial to student learning A close reading of the literature reveals that time spent on elucidating concepts rather than on algorithmic methodologies is a critical issue when trying to have students solve problems with understanding It is argued that conceptual understanding can be enhanced through the use of multiple methods in an environment where students can compare evaluate and verbally discuss competing methodologies through the facilitation of the instructor This book focuses on two very useful methods proportional reasoning PR and dimensional analysis DA These two methods are important because they can be used to solve a large number of problems in all of the four academic sciences biology chemistry physics and earth science This book concludes with a plan to integrate DA and PR into the academic science curriculum starting in late elementary school through to the introductory college level A challenge is presented to teachers as well as to textbook writers who rely on the single method paradigm to consider an alternative way to teach scientific problem solving **(Free Sample) GO TO**
